

# Superposition I

The response of an LTI system  $G$  to input  $u(t)$  is  $y(t)$ , as shown in the figure. What is the response of the system to the input  $u_1(t)$ ? Sketch your answer on a  $3 \times 5$  card. When done, indicate the confidence you have in your answer:

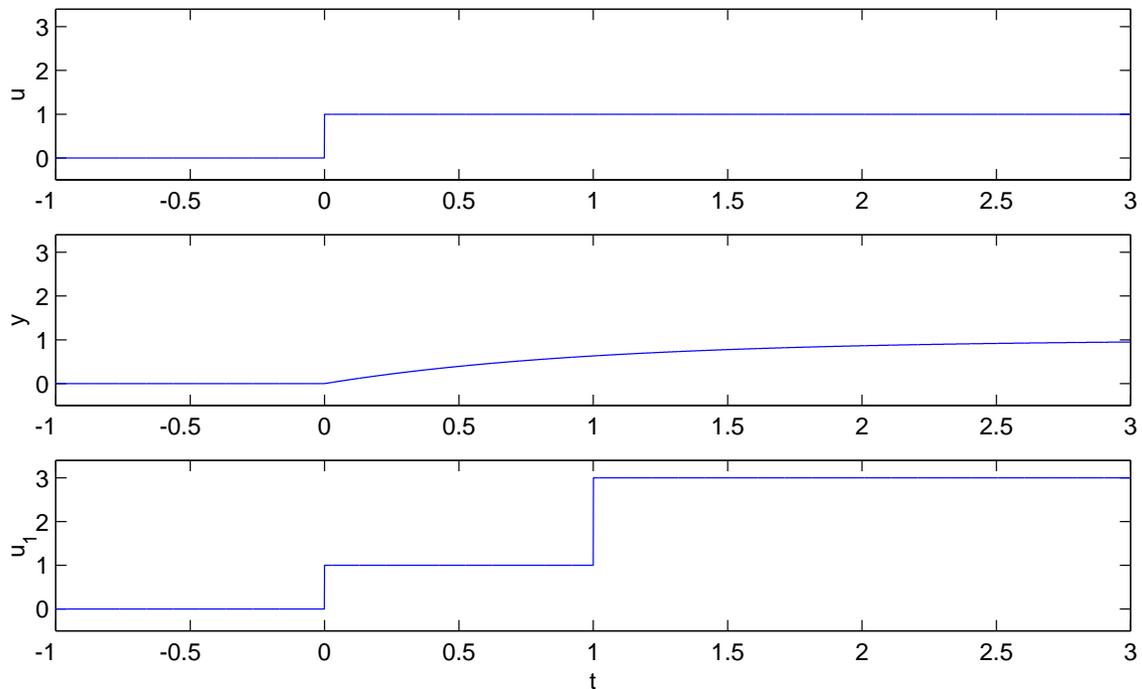

1. 100%
2. 75%
3. 50%
4. 25%
5. 0%

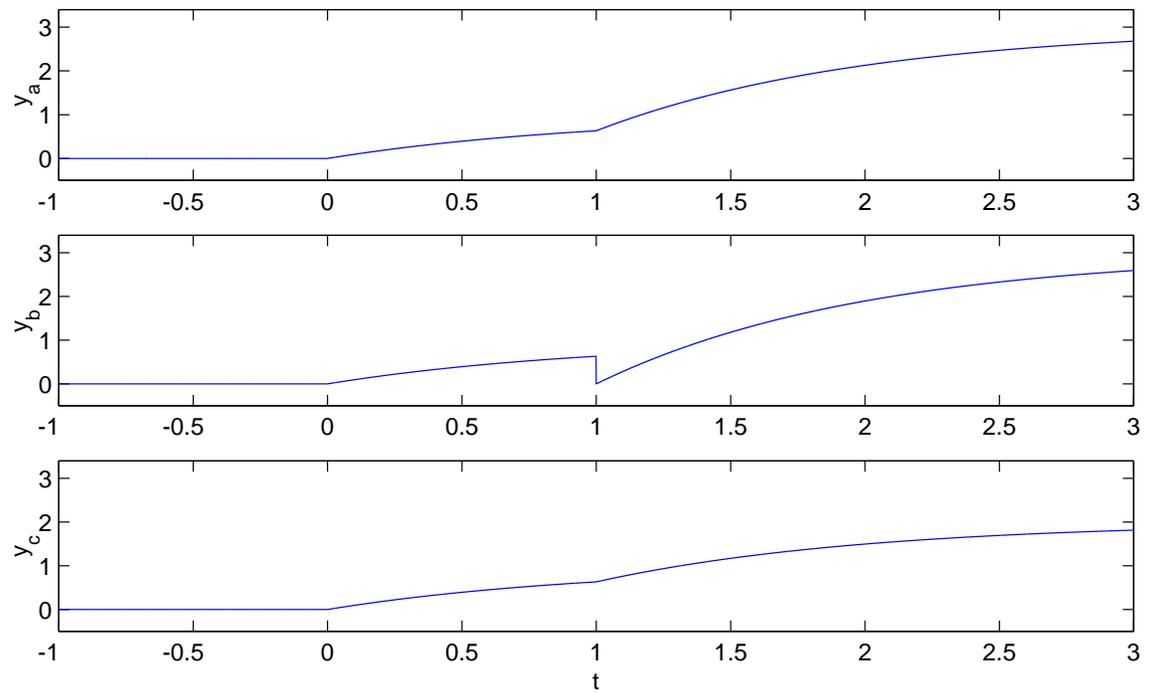

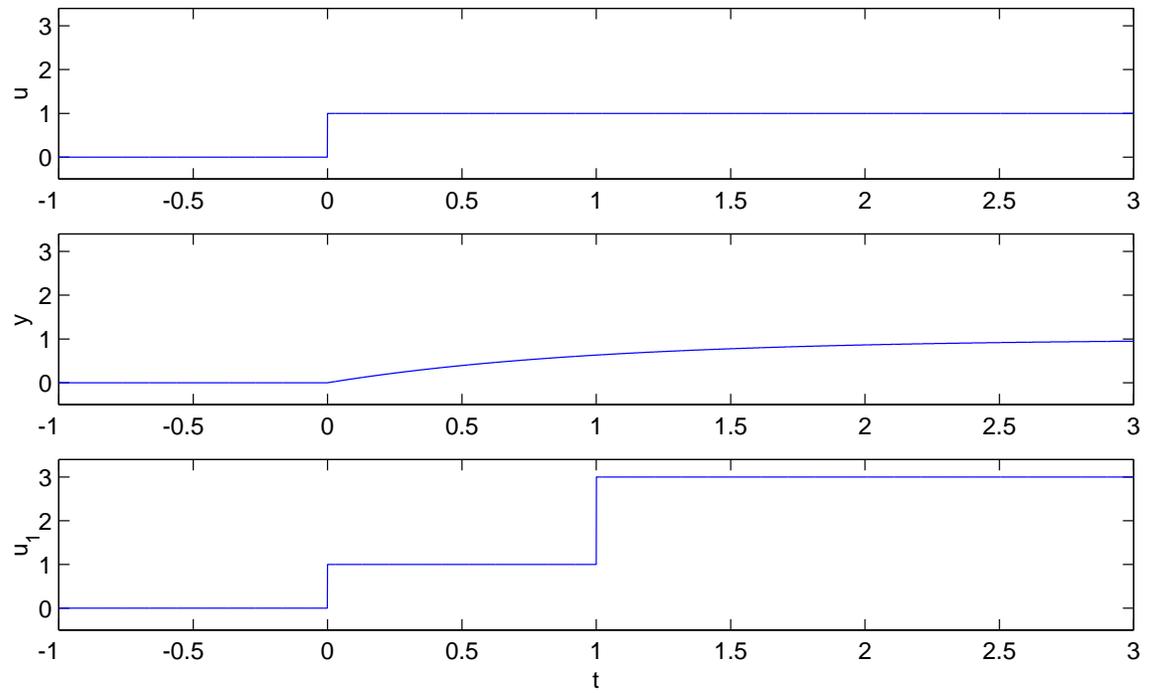

# Superposition II

The response of an LTI system  $G$  to input  $u(t)$  is  $y(t)$ , as shown in the figure. What is the response of the system to the input  $u_1(t)$ ?

1.  $y_a(t)$
2.  $y_b(t)$
3.  $y_c(t)$
4. I don't know

# Superposition II

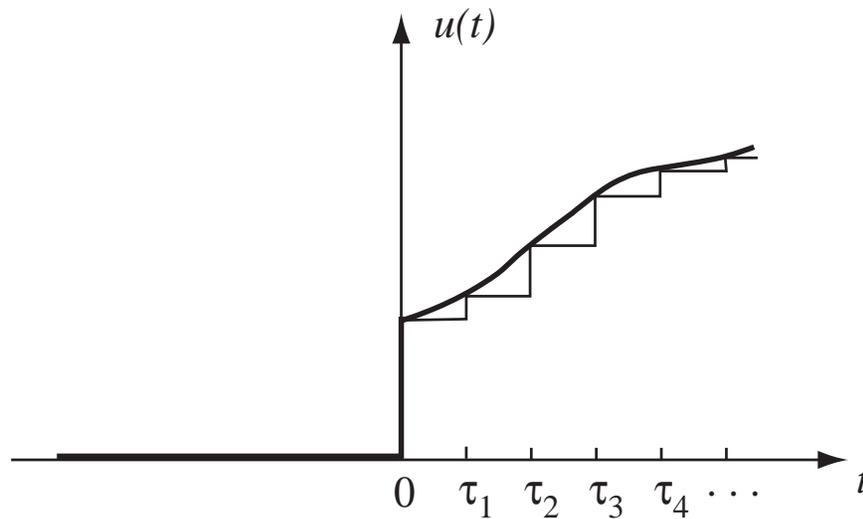

The response of an LTI system  $G$  to input  $u(t)$  is  $y(t)$ , as shown in the figure. What is the response of the system to the input  $u_1(t)$ ?

The correct answer is:

1.   $y_a(t)$
2.  $y_b(t)$
3.  $y_c(t)$
4. I don't know

# Response to General Input

Consider the input  $u(t)$  to a system  $G$ , with step response  $g_s(t)$ . The input is approximated by a staircase function, as shown below:

Find an (approximate) expression for the output of the system,  $y(t)$ .

$$y(t) \approx ?$$

# Response to General Input

My confidence that I have the correct answer is:

1. 100%
2. 80%
3. 60%
4. 40%
5. 20%
6. 0%

# Response to General Input

The correct answer is

$$y(t) \approx u(0)g_s(t) + \sum_{n=1}^{\infty} [u(\tau_n) - u(\tau_{n-1})] g_s(t - \tau_n)$$

My answer

1. Was completely correct
2. Was mostly correct, with one or two minor errors
3. Had many errors
4. Was completely incorrect
