Today's papers

Major Dissociation Between Medial and Lateral Entorhinal Input to Dorsal Hippocampus

Eric L. Hargreaves,^{1,2} Geeta Rao,¹ Inah Lee,^{1*} James J. Knierim^{1†}

17 JUNE 2005 VOL 308 SCIENCE www.sciencemag.org

Next week's reading: Where do memories live?

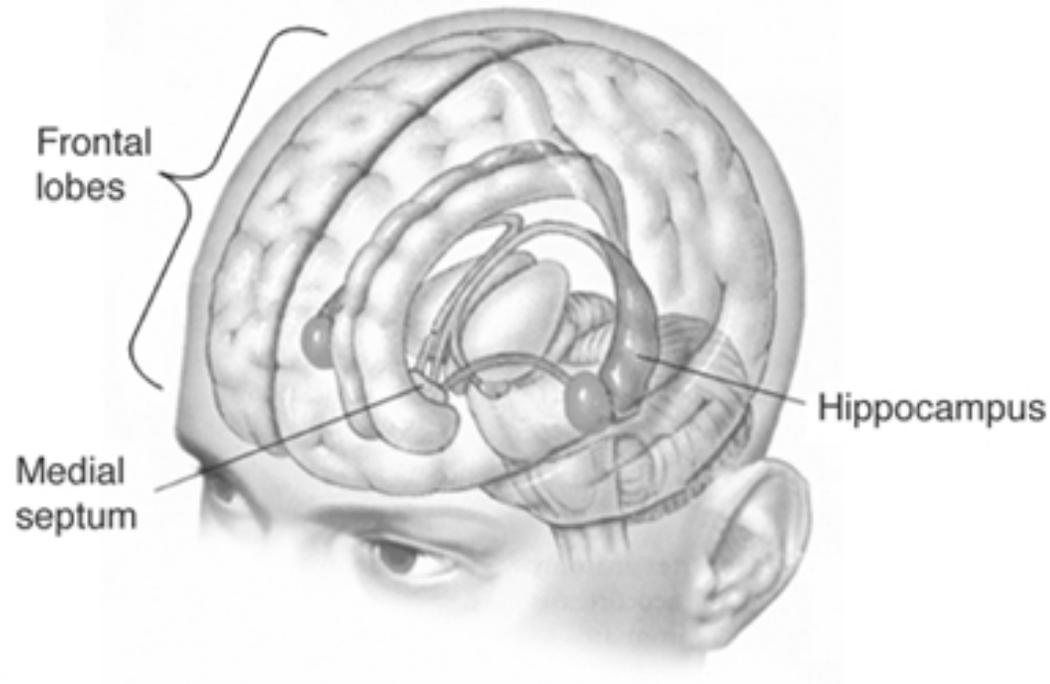

Image courtesy of the [National Institutes of Health](#)

Lesioning the hippocampus after
14-28 days does not affect memory
of contextual fear.

Modality-Specific Retrograde Amnesia of Fear

Jeansok J. Kim and Michael S. Fanselow

SCIENCE • VOL. 256 • 1 MAY 1992

Spatial memory can be retrieved in the absence of the hippocampus.

- Where does it go?
- What are the temporal dynamics?

Next week's questions

- Tse et al. – what does a non-cued trial control for?
- Give an example for a schema that you apply in your life experience.
