## Clados Company Response To Recent Events - Finally, an Explanation!

by: Christophe Maday

After recent events, with multiple newspapers covering the possibility of a defect in Clados Clones, along with yesterday's shocking discovery brought to us by anonymous tip, Clados Cloning finally responds.

"We feel that yesterday's article warranted a response." wrote the CEO himself.

Clados Cloning officials first addressed the accusations of a defect in their company clones. A chief scientist responded, "Such mental disabilities are necessarily a result of cloning. They could also be a characteristic of the original human that we cloned from. There is no direct correlation between our cloning process and inaccurate visions."

Clados himself commented on the anonymous tip that led to yesterday's article, "A tip like the one given yesterday is a clear violation of individual privacy, and I do not think it deserves a response. However, I would like to dismantle the ruckus it has caused. It is completely and totally false. To take advantage of my family's traumatic history in such a way is despicable, and potentially

scarring for my family members. I will not tolerate any version of this false rumor spreading. My family should not have to take this kind of abuse."

After this uncharacteristically harsh response, Clados left the premises, clearly upset, and refused to be photographed. With so much media attention on Clados Cloning recently, it is no surprise that Clados, the CEO and sole owner, is feeling the pressure of the spotlight. We hope to get more clarification in the near future.

Meanwhile, protest groups are growing borderline militant, demanding answers and proof of innocence from... *(continued on p. 8)*

## Europa Colony Finds Stable Water Supply

by: Lorde Levier

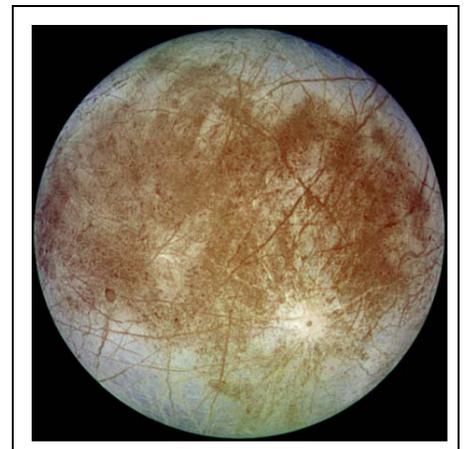

The sixth-largest moon in the solar system, Europa, has been the best candidate for an extraterrestrial settlement for the past 3 decades. With an atmosphere that is primarily composed of oxygen and a surface made up of ice water, it has remained at the top of NASA's exploration list.

Upon arrival, the YT-1300 crew discovered that, as hypothesized, a water ocean does indeed exist below the smooth surface of this Galilean satellite.

In the past month, the YT-1300 voyagers have set up camp almost seamlessly, running into only a few minor roadblocks along the way.

"We hope to make this a permanent settlement location," explained NASA team lead, George Marshall. "However, we do not know how self-sustaining the YT-1300 settlement can become. They currently rely on monthly shipments from Earth with the essential nutrients and equipment needed to sustain the entire crew."

The crew members are currently focused on conducting sustainability tests. They wish to identify Europa's natural resources and minerals. However, they have already accomplished the crucial first step -- finding a constant water source.
