# The Story So Far

---

- Modeling
  - splines, hierarchies, transformations, meshes, etc.
- Animation
  - skinning, ODEs, masses and springs
- **Now we'll see how to generate an image given a scene description!**

# The Remainder of the Term

- Ray Casting and Ray Tracing
- Intro to Global Illumination
  - Monte Carlo techniques, photon mapping, etc.
- Shading, texture mapping
  - What makes materials look like they do?
- Image-based Rendering
- Sampling and antialiasing
- Rasterization, z-buffering
- Shadow techniques
- Graphics Hardware

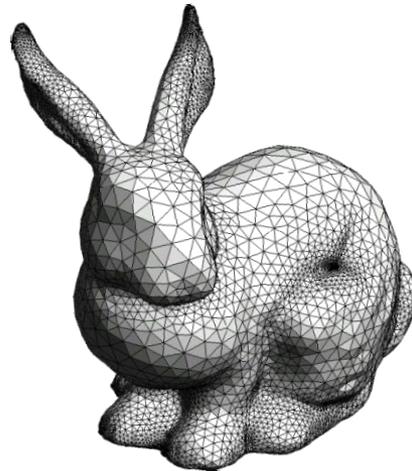

# Today

---

- What does *rendering* mean?
- Basics of ray casting

Scene

This image is in the public domain.  
Source: [openclipart](http://openclipart)

**Pixel Color  
Determined by  
Lighting/Shading**

# Rendering

---

- “Rendering” refers to the entire process that produces color values for pixels, given a 3D representation of the scene
- Pixels correspond to rays; need to figure out the **visible** scene point along each ray
  - Called “hidden surface problem” in older texts
  - “Visibility” is a more modern term
  - Also, we assume (for now) a single ray per pixel

# Rendering

---

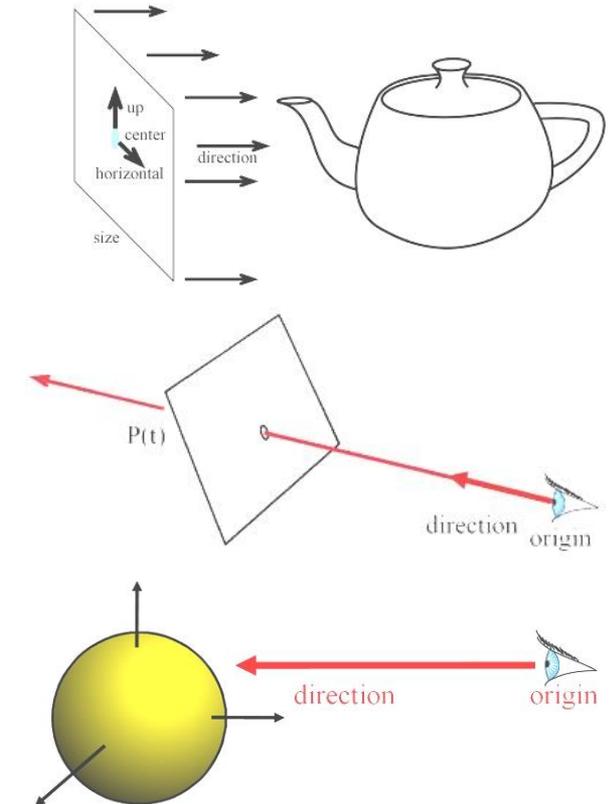

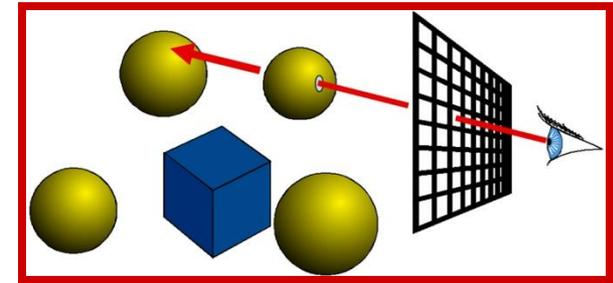

- “Rendering” refers to the entire process that produces color values for pixels
- Pixels correspond to rays; need to figure out the **visible** scene point along each ray
  - Called “hidden surface problem” in older texts
  - “Visibility” is a more modern term
  - Also, we assume (for now) a single ray per pixel
- Major algorithms: **Ray casting and rasterization**
- Note: We are assuming a pinhole camera (for now)

# Questions?

---

# Ray Casting

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection

# Ray Casting

---

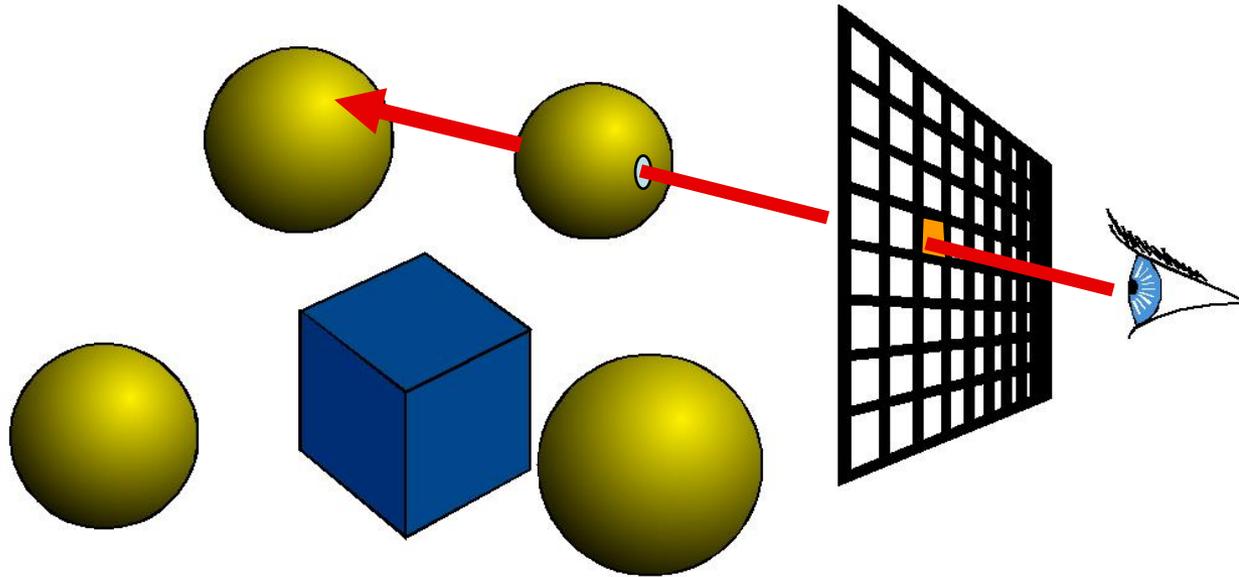

For every pixel

Construct a ray from the eye

For every object in the scene

Find intersection with the ray

Keep if closest

# Shading

---

For every pixel

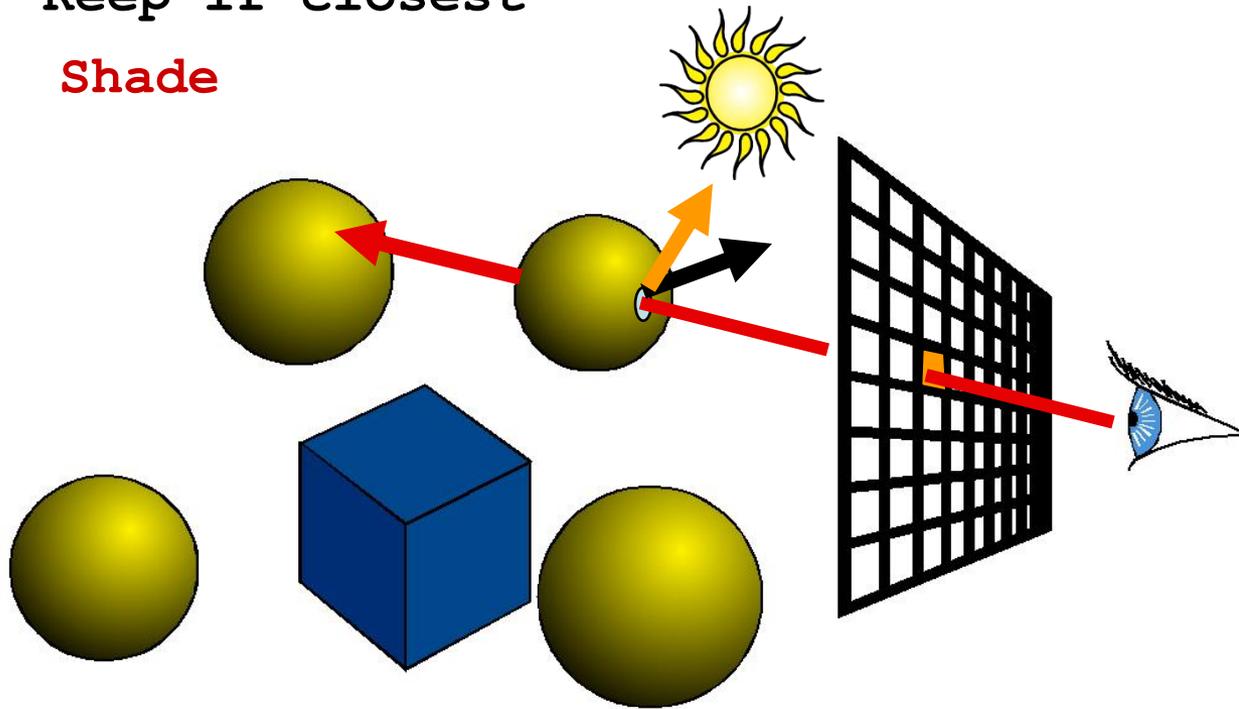

Construct a ray from the eye

For every object in the scene

Find intersection with the ray

Keep if closest

**Shade**

# Shading = What Surfaces Look Like

- Surface/Scene Properties

- surface normal
- direction to light
- viewpoint

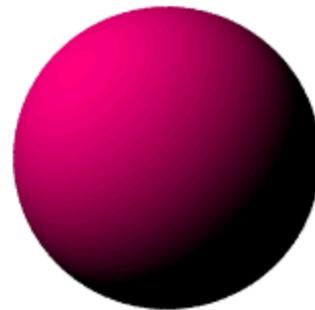

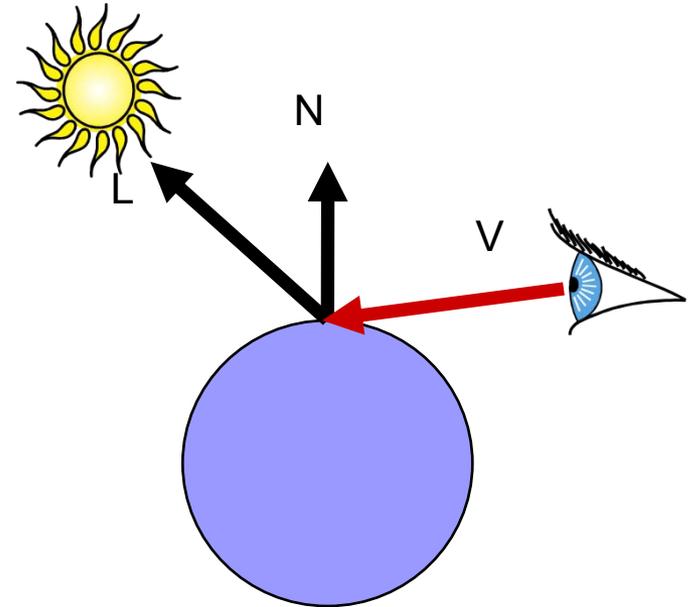

- Material Properties

- Diffuse (matte)
- Specular (shiny)
- ...

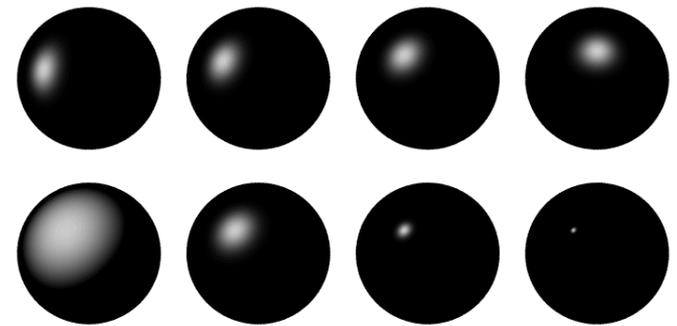

- Light properties

- Position
- Intensity, ...

- Much more!

*Diffuse sphere*

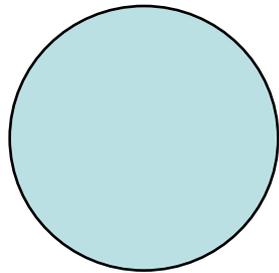

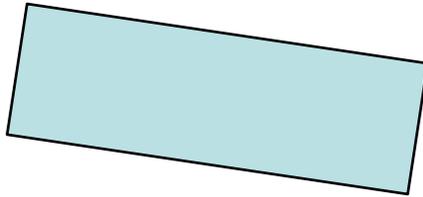

*Specular spheres*

# Ray Casting vs. Ray Tracing

---

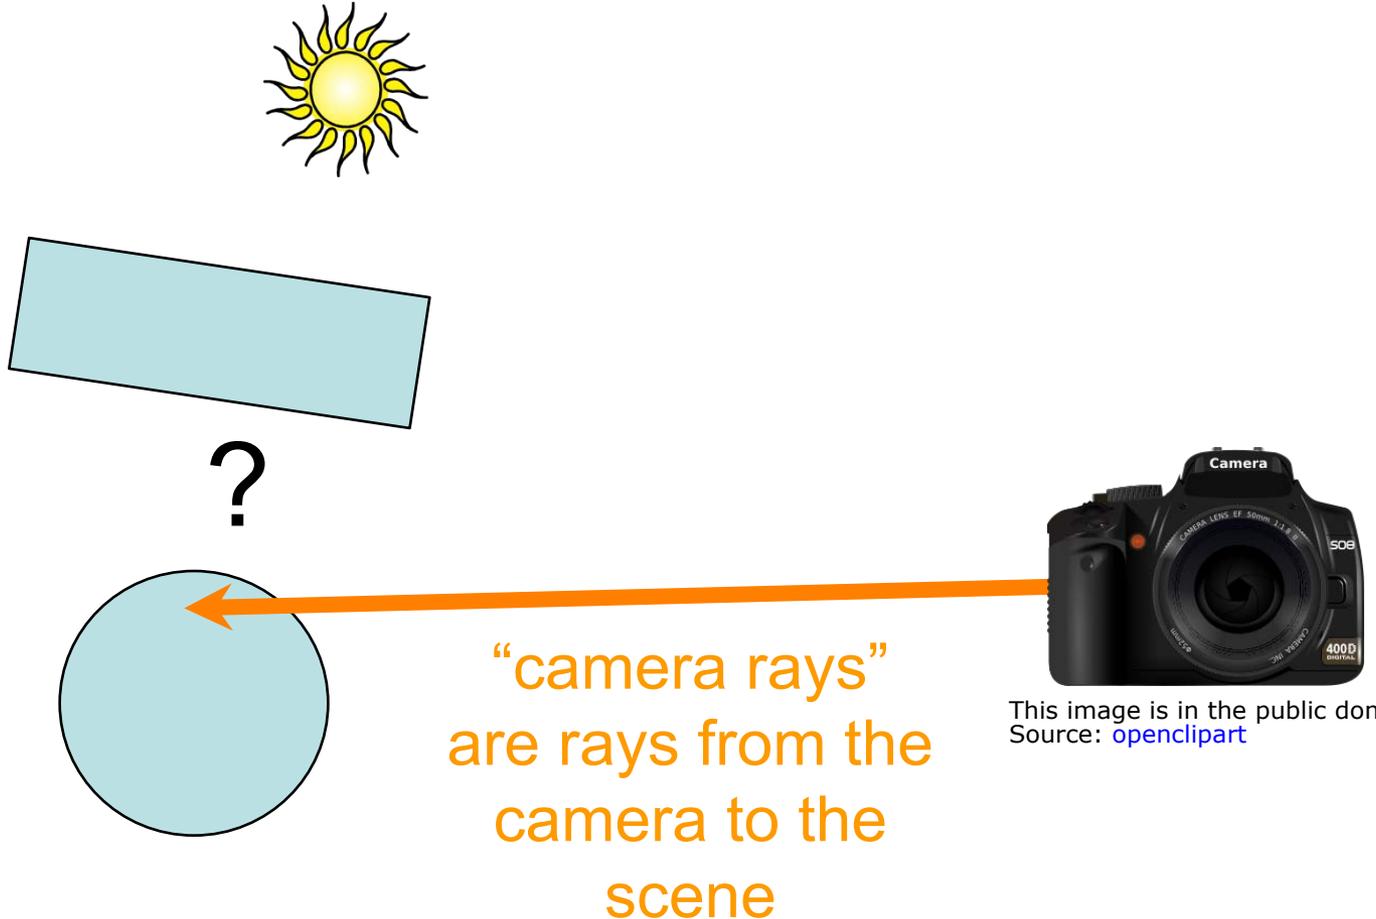

- Let's think about shadows...

This image is in the public domain.  
Source: [openclipart](#)

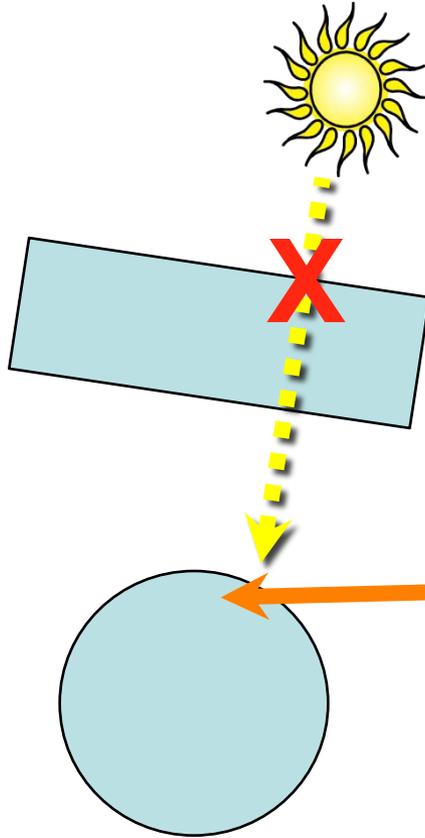

# Ray Casting vs. Ray Tracing

---

# Ray Casting vs. Ray Tracing

---

ray from light to hit  
point is blocked, i.e.,  
**point is in shadow**

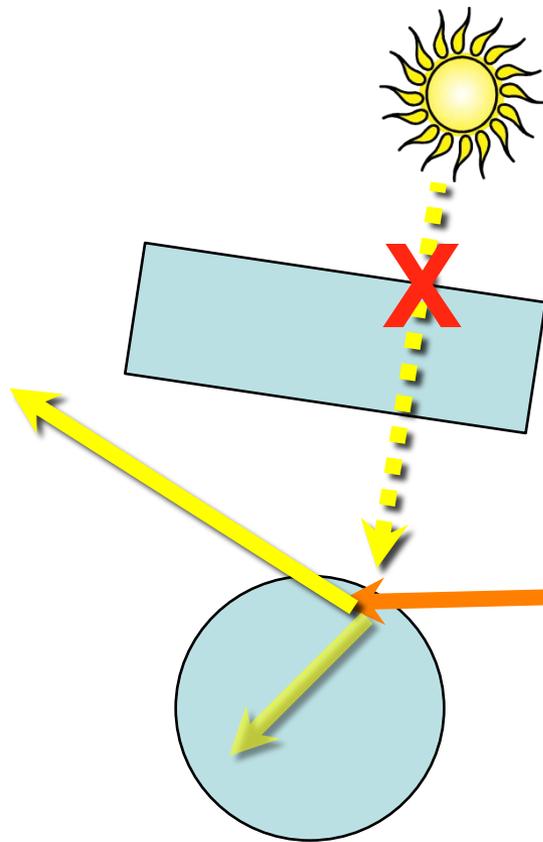

This image is in the public domain.  
Source: [openclipart](#)

# Ray Casting vs. Ray Tracing

---

- Ray casting = eye rays only, tracing = also secondary

**Secondary rays are used for testing shadows, doing reflections, refractions, etc.**

This image is in the public domain.  
Source: [openclipart](#)

**We'll do all this a little later!**

# Questions?

---

# Ray Casting

---

For every pixel

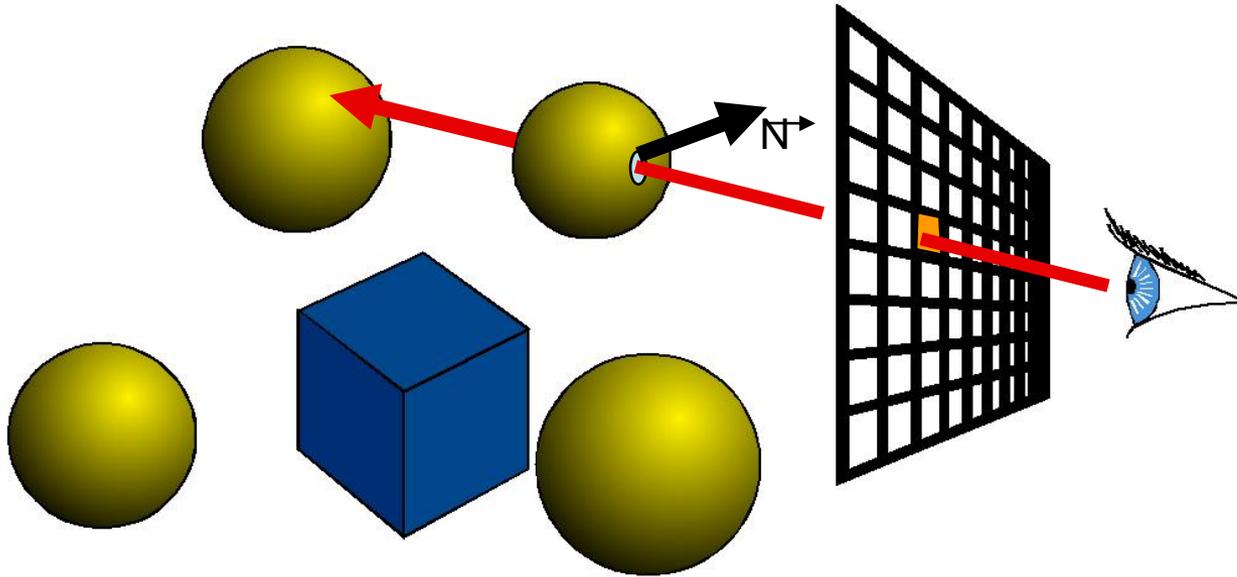

Construct a ray from the eye

For every object in the scene

**Find intersection with the ray**

Keep if closest

Shade depending on light and **normal** vector

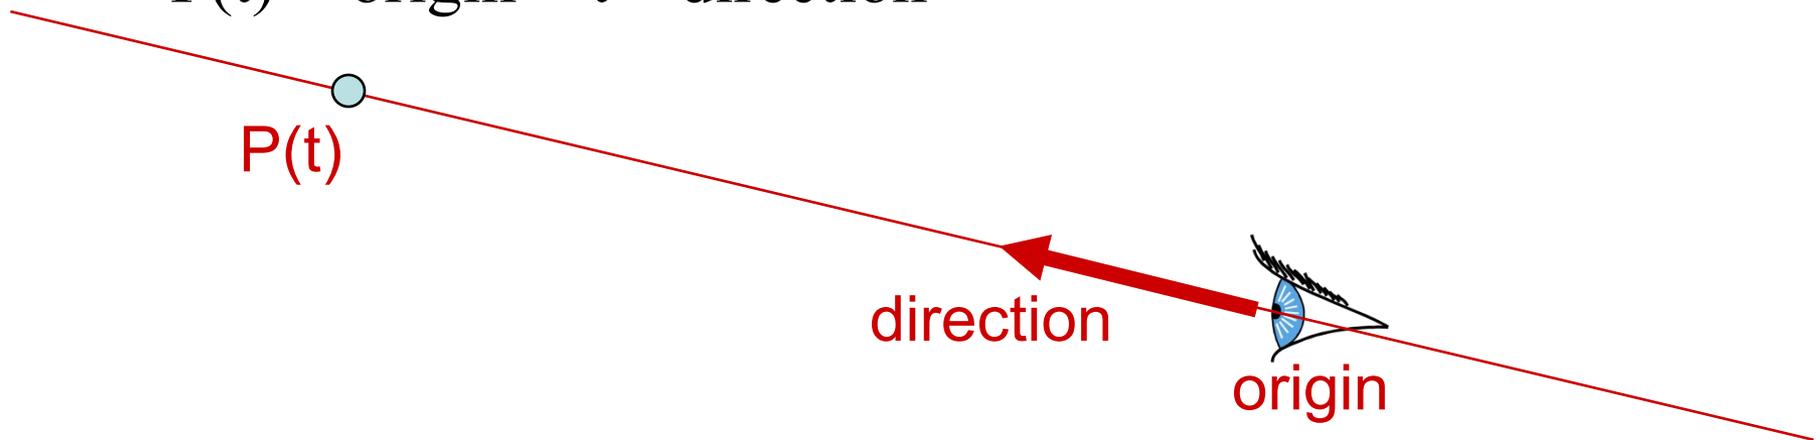

Finding the **intersection point** and **normal** is the central part of ray casting

# Ray Representation

---

- Origin – Point
- Direction – Vector
  - normalized is better
- Parametric line
  - $P(t) = \text{origin} + t * \text{direction}$

**How would you represent a ray?**

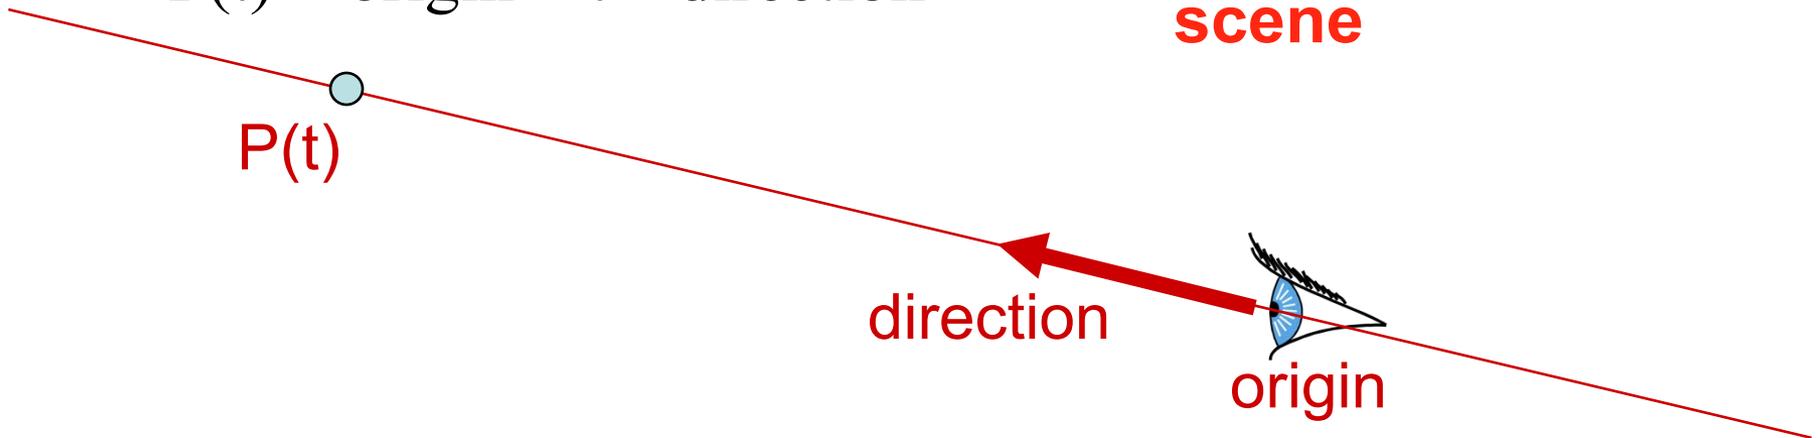

# Ray Representation

---

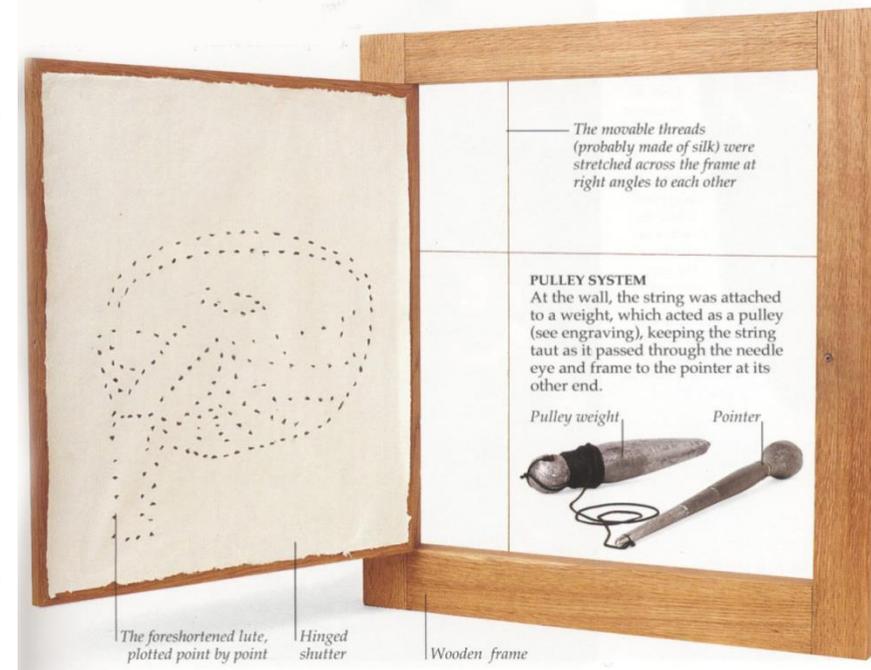

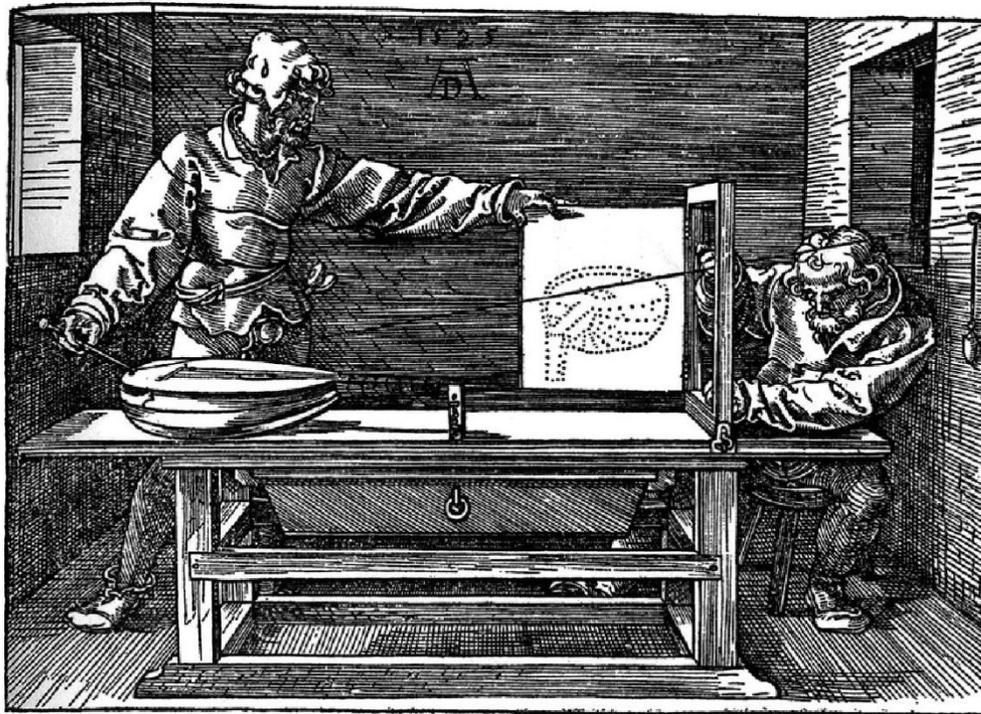

- Origin – Point
- Direction – Vector
  - normalized is better
- Parametric line
  - $P(t) = \text{origin} + t * \text{direction}$

Another way to put the ray casting problem statement:  
**Find smallest  $t > 0$  such that  $P(t)$  lies on a surface in the scene**

# Dürer's Ray Casting Machine

- **Albrecht Dürer**, 16<sup>th</sup> century

# Pinhole Camera

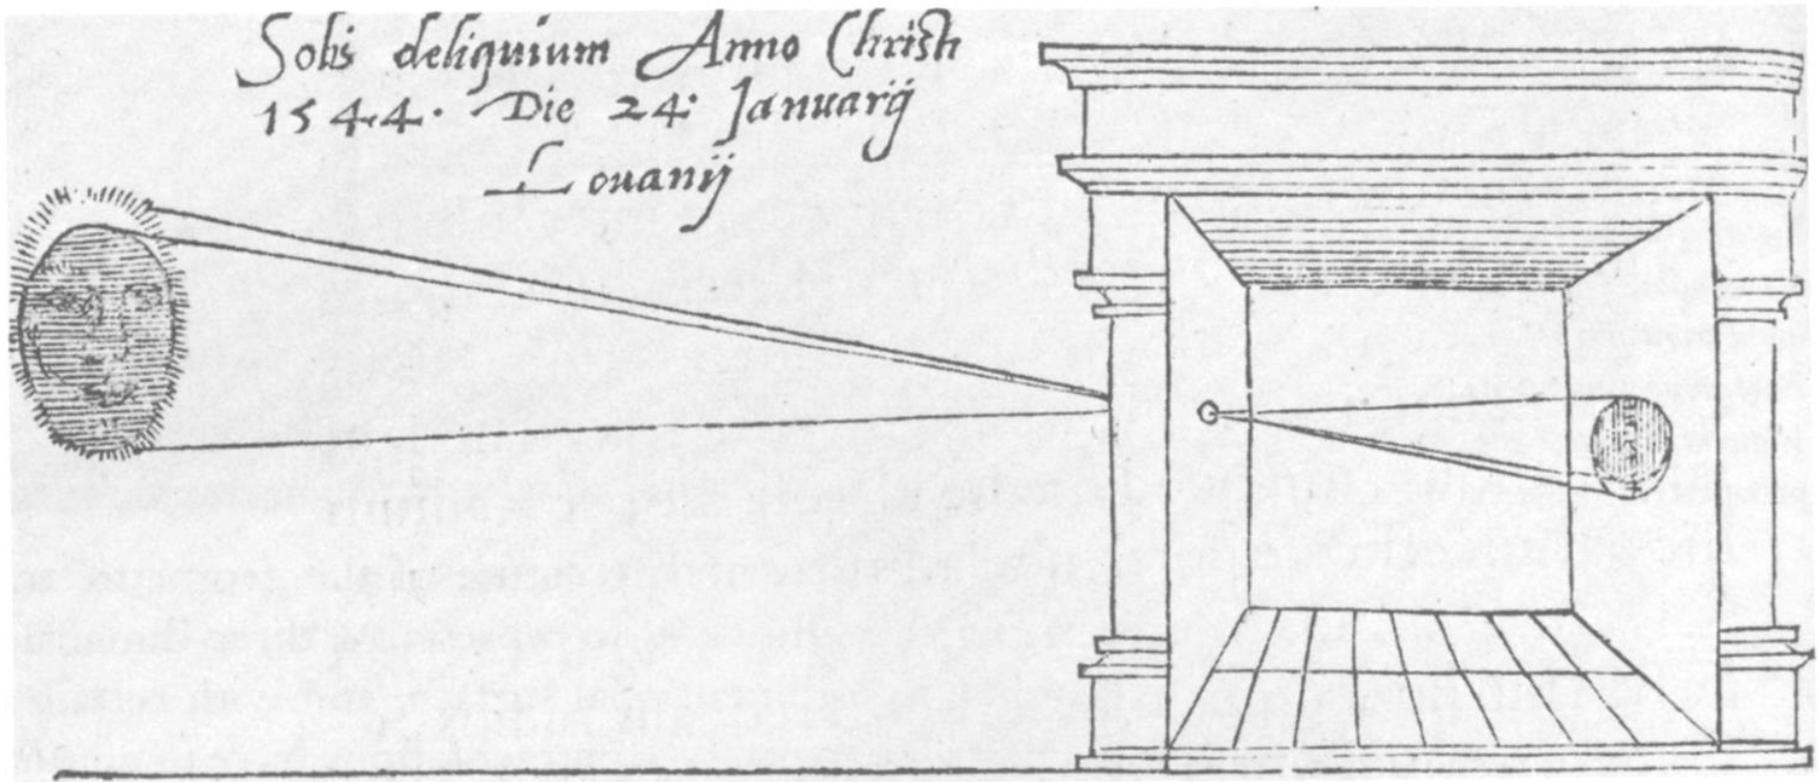

---

- Box with a tiny hole
- Inverted image
- Similar triangles
- Perfect image if hole infinitely small
- Pure geometric optics
- No depth of field issue (everything in focus)

**View**  
**coordinates**  
Image  
coordinates

# Image Coordinates

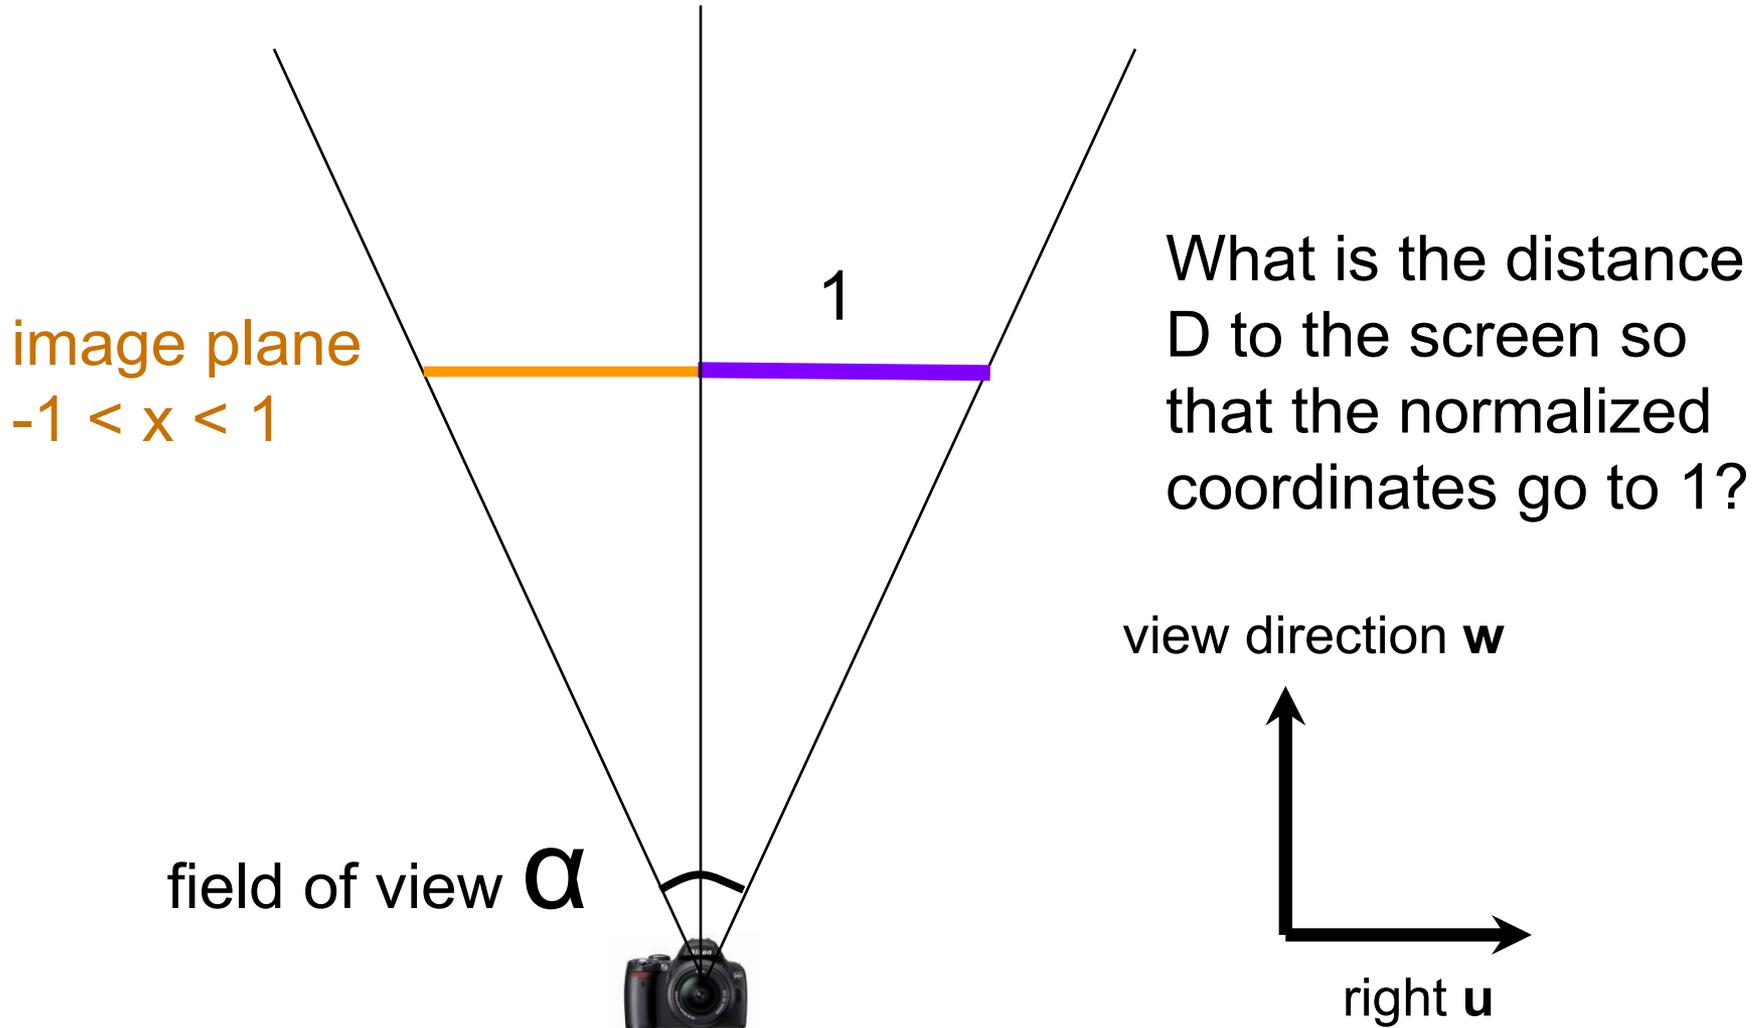

# Ray Generation in 2D

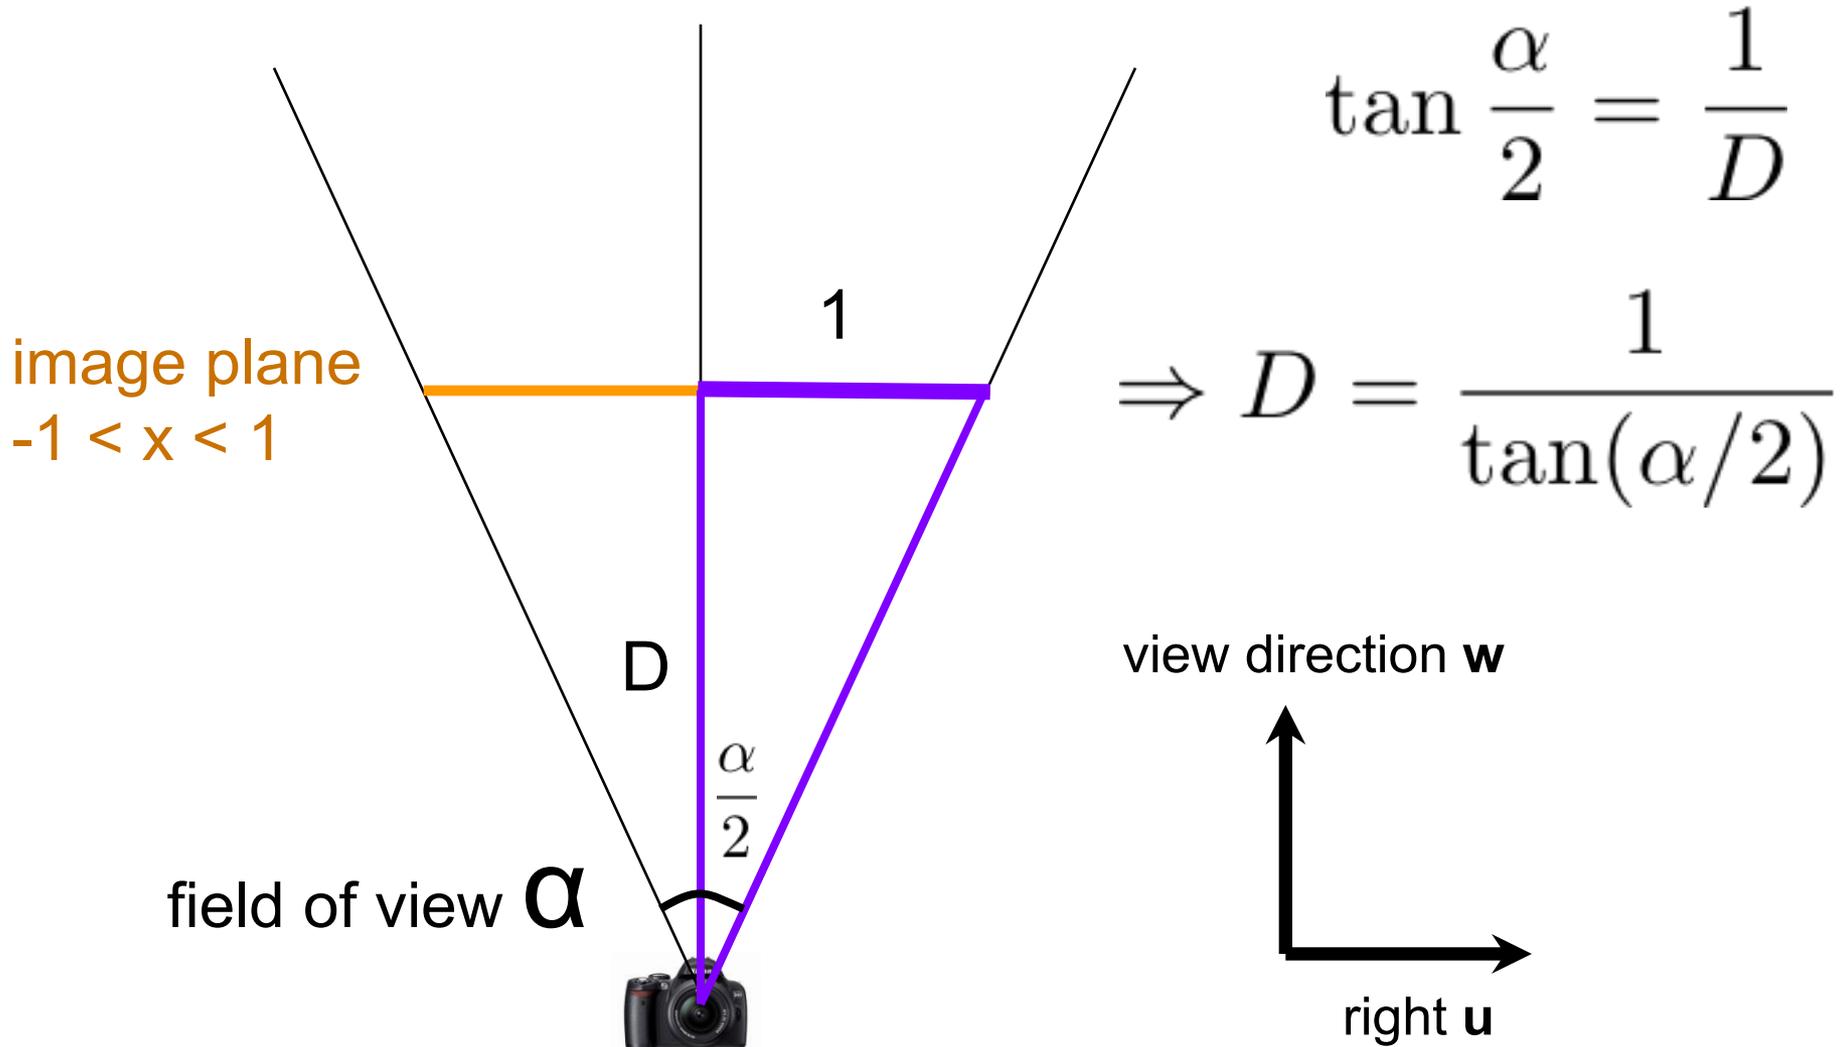

This image is in the public domain. Source: [openclipart](#)

# Ray Generation in 2D

What is the distance  $D$  to the screen so that the normalized coordinates go to 1?

# Ray Generation in 2D

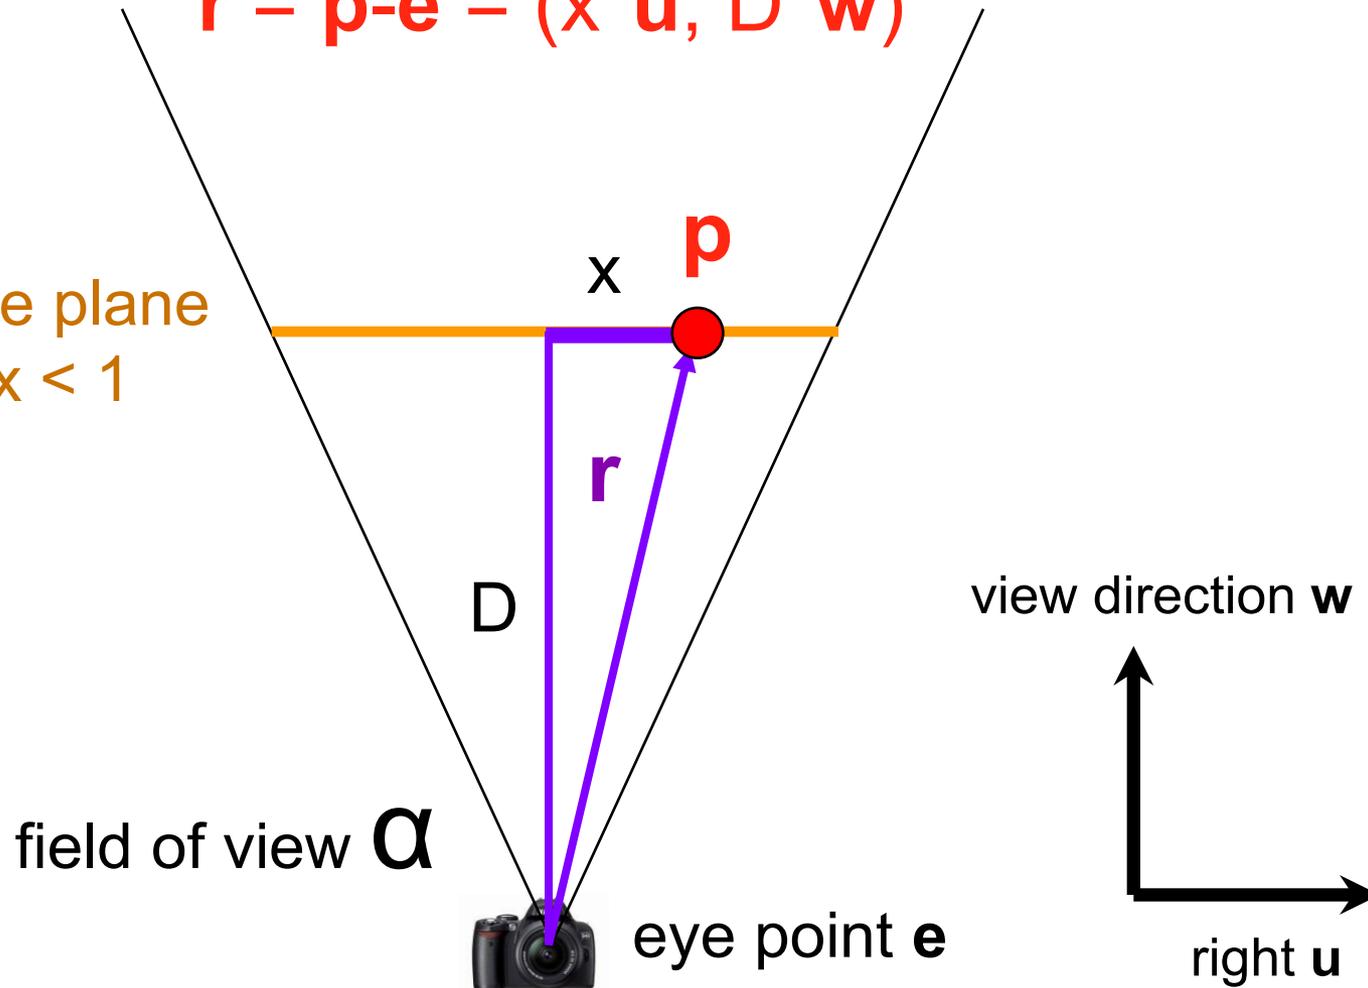

This image is in the public domain. Source: [openclipart](#)

# Ray Generation in 2D

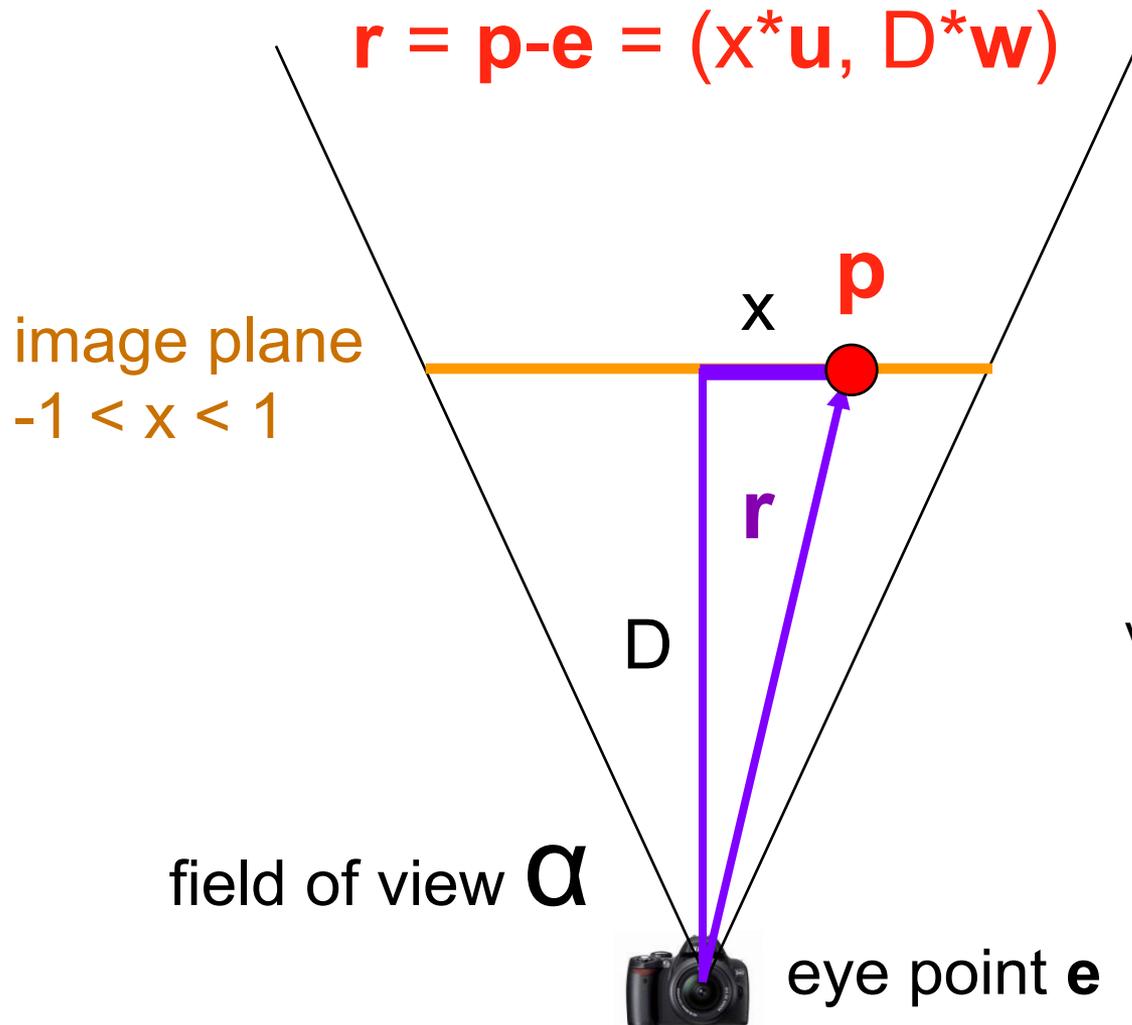

$$\mathbf{r} = \mathbf{p} - \mathbf{e} = (x * \mathbf{u}, D * \mathbf{w})$$

image plane  
 $-1 < x < 1$

This image is in the public domain. Source: [openclipart](#)

# Ray Generation in 2D

then we just  
normalize  $\mathbf{r}$  to get  
the ray

$$P(t) = e + td$$
$$(d = r / \|r\|)$$

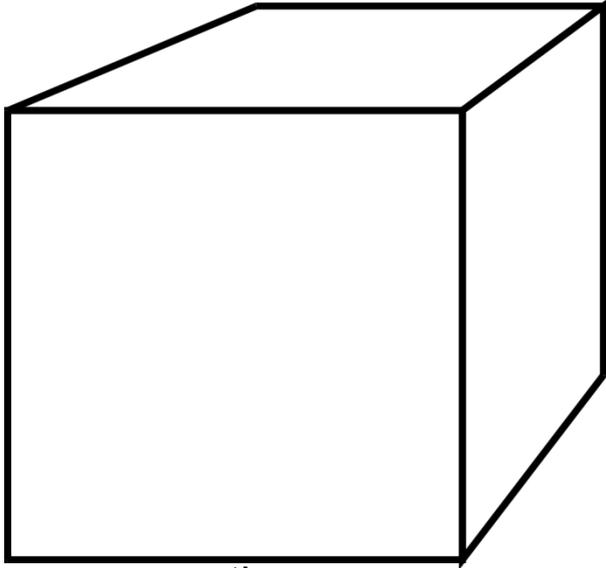

# That was 2D, 3D is just as simple

---

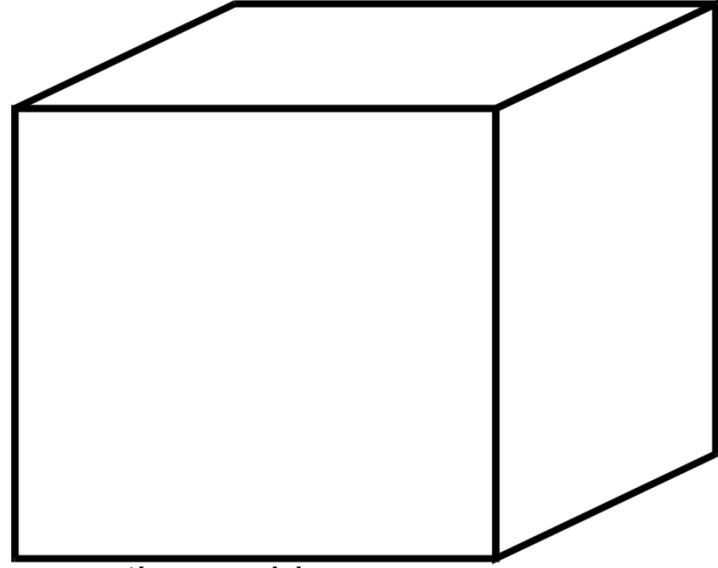

- $y$  coordinate is treated just like  $x$ , except accounting for aspect ratio
  - $\mathbf{r} = (x*\mathbf{u}, \text{aspect}*y*\mathbf{v}, D*\mathbf{w})$
  - Again,  $\mathbf{u}$ ,  $\mathbf{v}$ ,  $\mathbf{w}$  are the basis vectors of the view coordinate system
  - Aspect ratio handles non-square viewports
    - Think of your 16:9 widescreen TV
- The point of the exercise with computing  $D$  was to allow us to use the  $[-1,1]$  image coordinate system regardless of field of view.

# Perspective vs. Orthographic

---

perspective

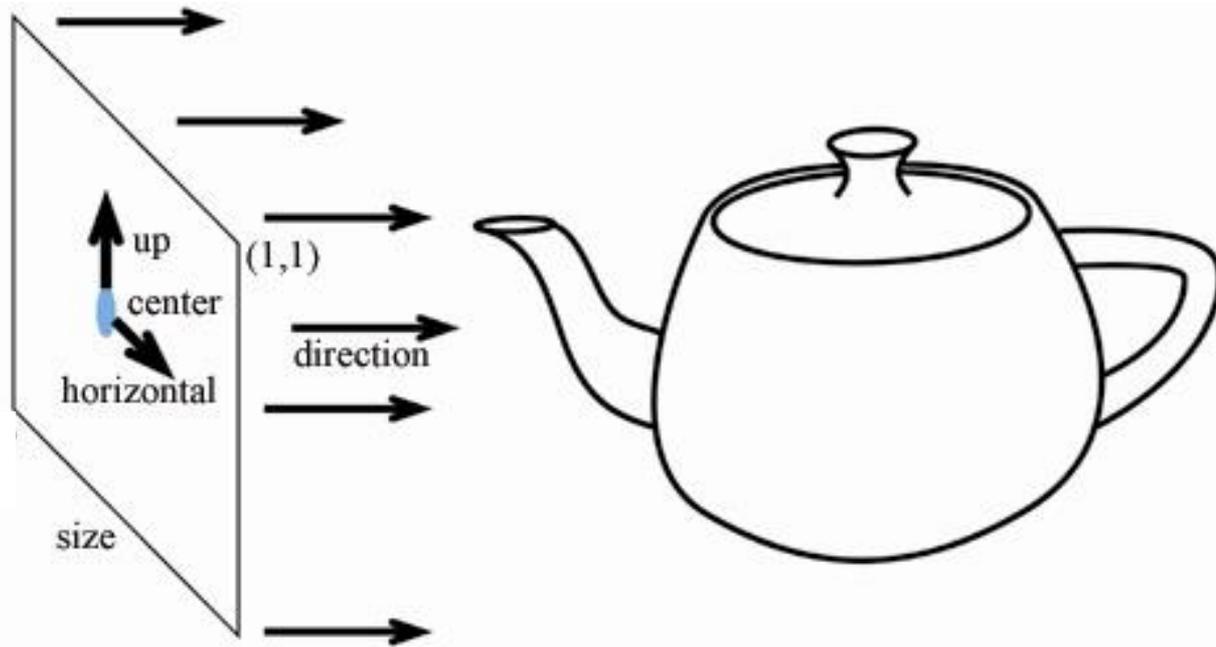

orthographic

- Parallel projection
- No foreshortening
- No vanishing point

# Orthographic Camera

---

- Ray Generation?
  - Origin =  $\mathbf{e} + x \cdot \text{size} \cdot \mathbf{u} + y \cdot \text{size} \cdot \mathbf{v}$
  - Direction is constant:  $\mathbf{w}$

# Other Weird Cameras

- E.g. fish eye, omnimax, parabolic

# Ray Casting

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection

# Ray Casting

---

For every pixel

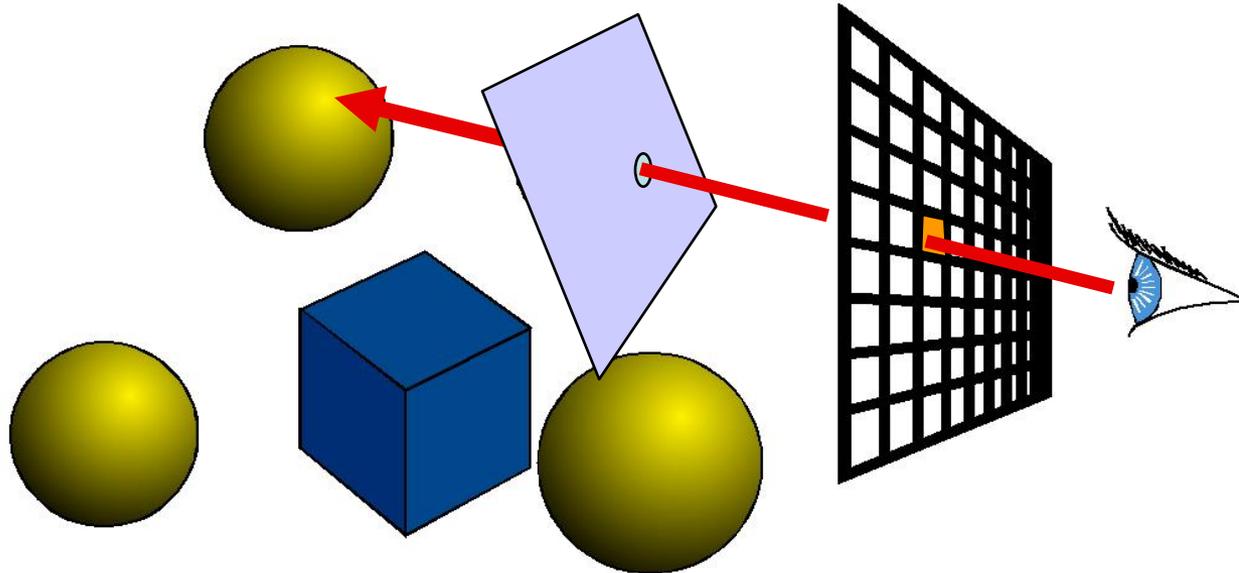

Construct a ray from the eye

For every object in the scene

**Find intersection with the ray**

Keep if closest

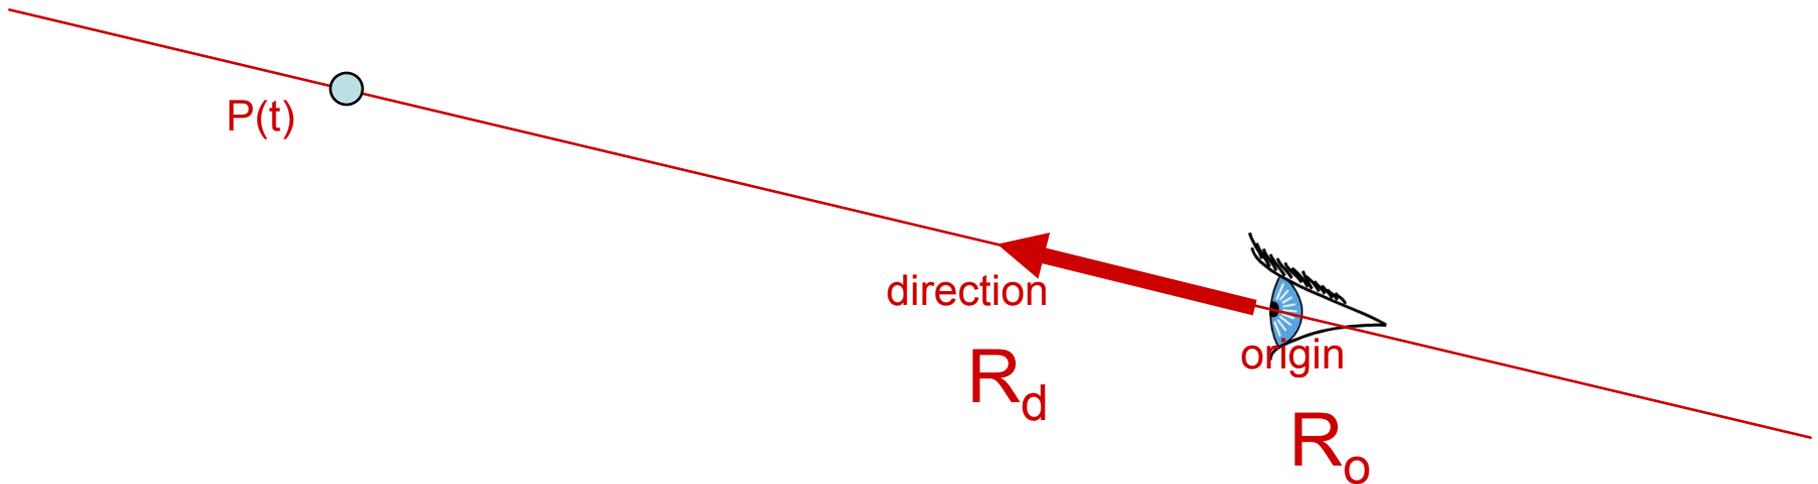

First we will study ray-plane intersection

# Recall: Ray Representation

---

- Parametric line
- $P(t) = R_o + t * R_d$
- Explicit representation

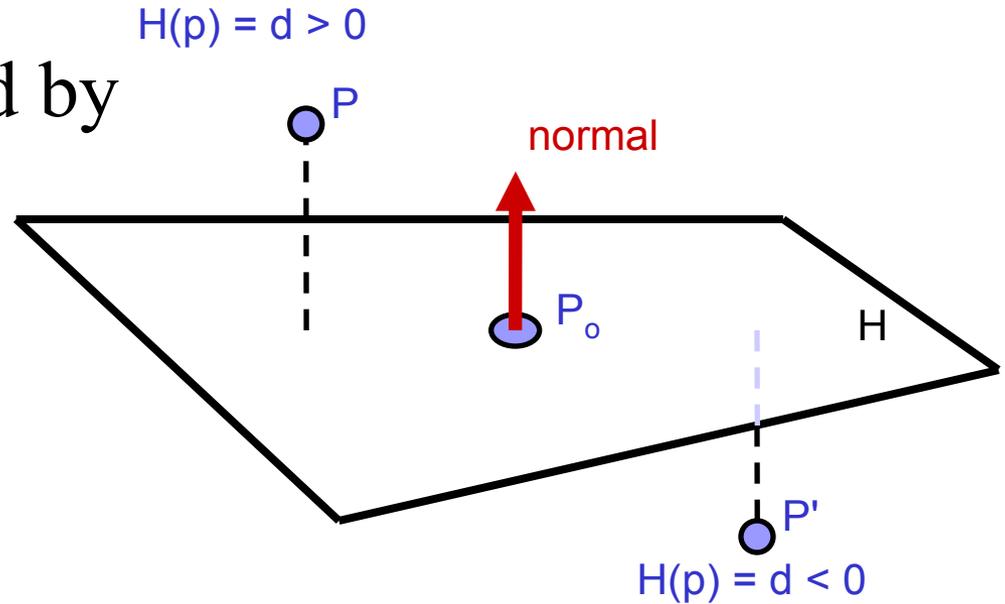

# 3D Plane Representation?

- (Infinite) plane defined by

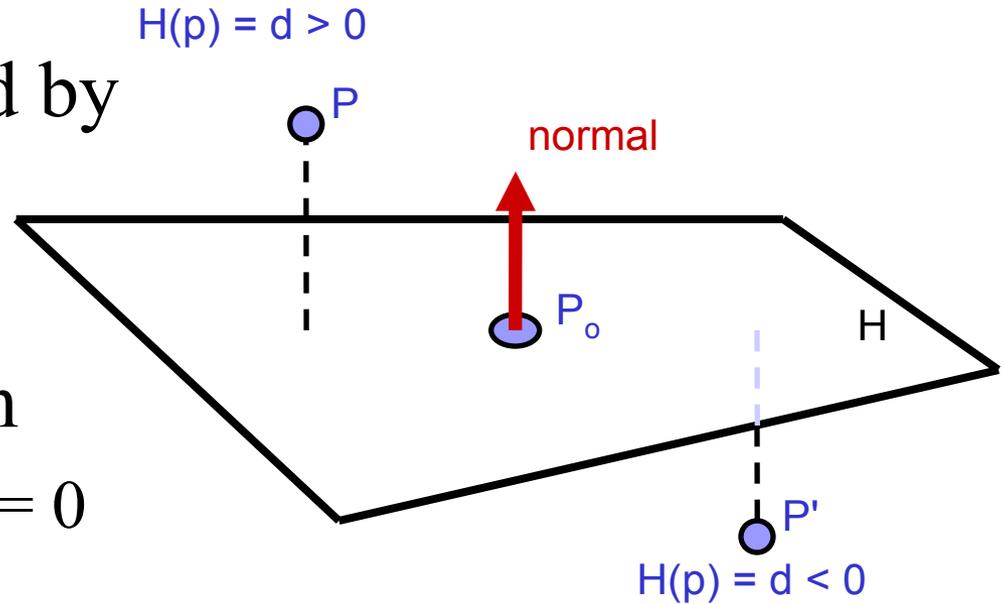

- $P_o = (x_0, y_0, z_0)$

- $n = (A, B, C)$

# 3D Plane Representation?

- (Infinite) plane defined by
  - $P_o = (x_0, y_0, z_0)$
  - $\mathbf{n} = (A, B, C)$
- Implicit plane equation
  - $H(P) = Ax + By + Cz + D = 0$   
 $= \mathbf{n} \cdot \mathbf{P} + D = 0$

# 3D Plane Representation?

- (Infinite) plane defined by

- $P_0 = (x_0, y_0, z_0)$

- $n = (A, B, C)$

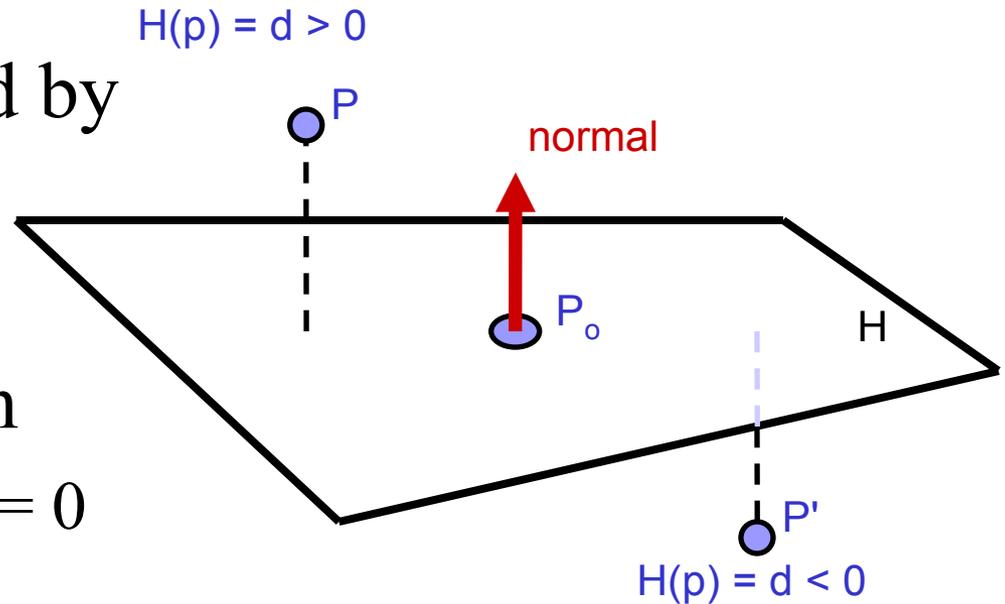

- Implicit plane equation

- $H(P) = Ax + By + Cz + D = 0$   
 $= n \cdot P + D = 0$

- What is D?

$$Ax_0 + By_0 + Cz_0 + D = 0 \quad (\text{Point } P_0 \text{ must lie on plane})$$

$$\Rightarrow D = -Ax_0 - By_0 - Cz_0$$

# 3D Plane Representation?

- (Infinite) plane defined by

- $P_o = (x_0, y_0, z_0)$

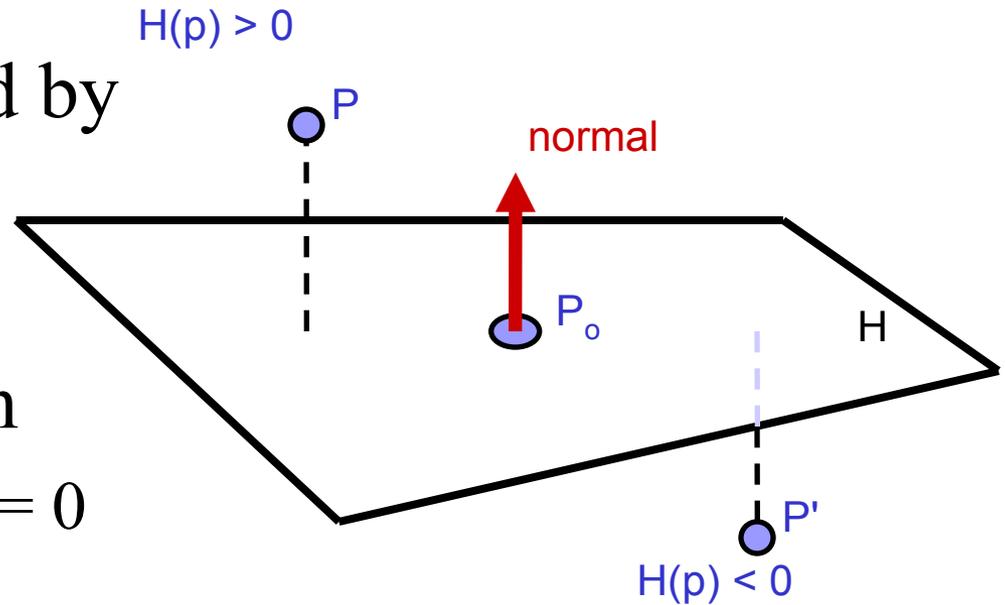

- $n = (A, B, C)$

- Implicit plane equation

- $H(P) = Ax + By + Cz + D = 0$   
 $= n \cdot P + D = 0$

- Point-Plane distance?

- If  $n$  is normalized,  
distance to plane is  $H(P)$
  - it is a *signed distance*!

# Explicit vs. Implicit?

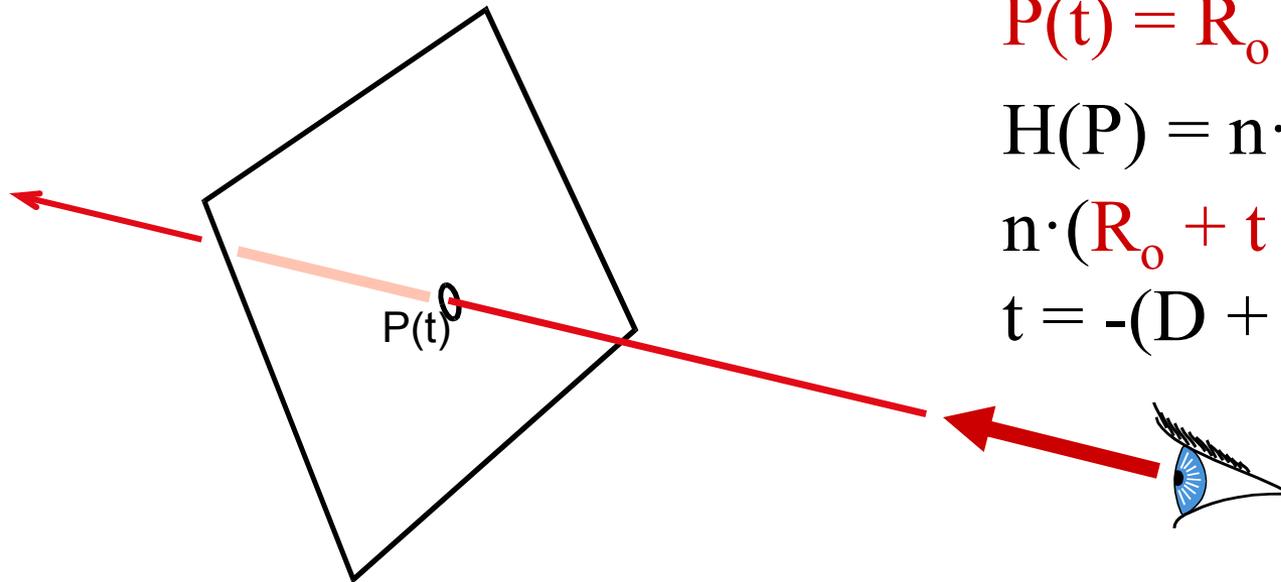

---

- Ray equation is explicit  $P(t) = R_o + t * R_d$ 
  - Parametric
  - Generates points
  - Hard to verify that a point is on the ray
- Plane equation is implicit  $H(P) = n \cdot P + D = 0$ 
  - Solution of an equation
  - Does not generate points
  - Verifies that a point is on the plane
- Exercise: Explicit plane and implicit ray?

# Ray-Plane Intersection

---

- Intersection means both are satisfied
- So, insert explicit equation of ray into implicit equation of plane & solve for  $t$

$$\mathbf{P}(t) = \mathbf{R}_o + t * \mathbf{R}_d$$

$$H(\mathbf{P}) = \mathbf{n} \cdot \mathbf{P} + D = 0$$

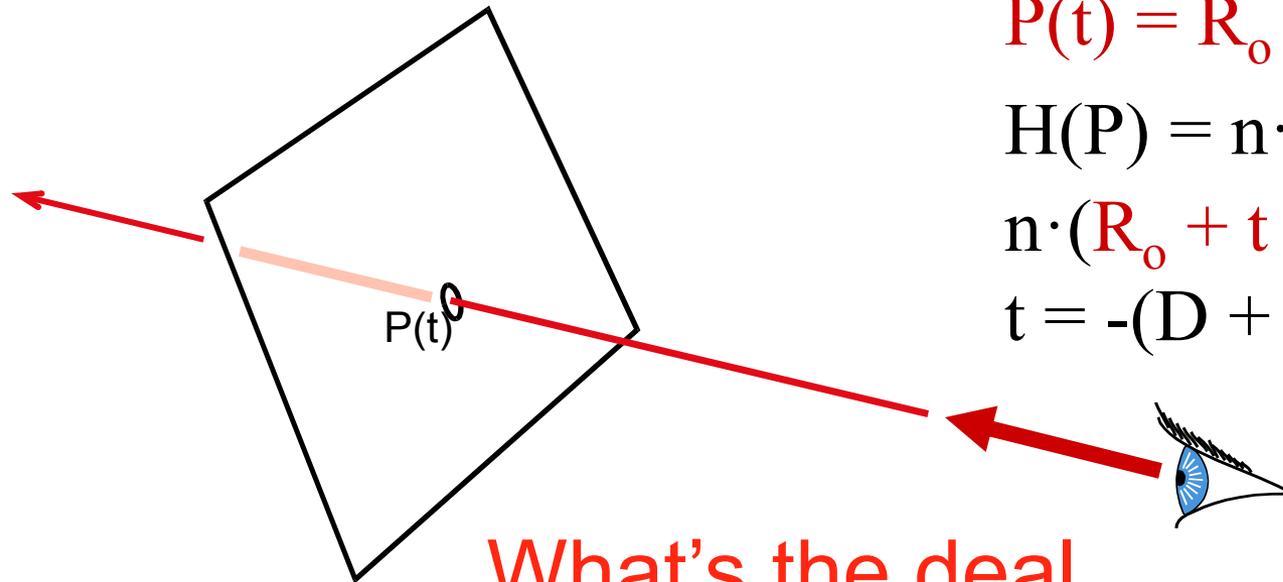

$$\mathbf{n} \cdot (\mathbf{R}_o + t * \mathbf{R}_d) + D = 0$$

$$t = -(\mathbf{D} + \mathbf{n} \cdot \mathbf{R}_o) / \mathbf{n} \cdot \mathbf{R}_d$$

**Done!**

# Ray-Plane Intersection

- Intersection means both are satisfied
- So, insert explicit equation of ray into implicit equation of plane & solve for  $t$

$$P(t) = R_o + t * R_d$$

$$H(P) = n \cdot P + D = 0$$

$$n \cdot (R_o + t * R_d) + D = 0$$

$$t = -(D + n \cdot R_o) / n \cdot R_d$$

**Done!**

What's the deal  
when  $n \cdot R_d = 0$ ?

# Additional Bookkeeping

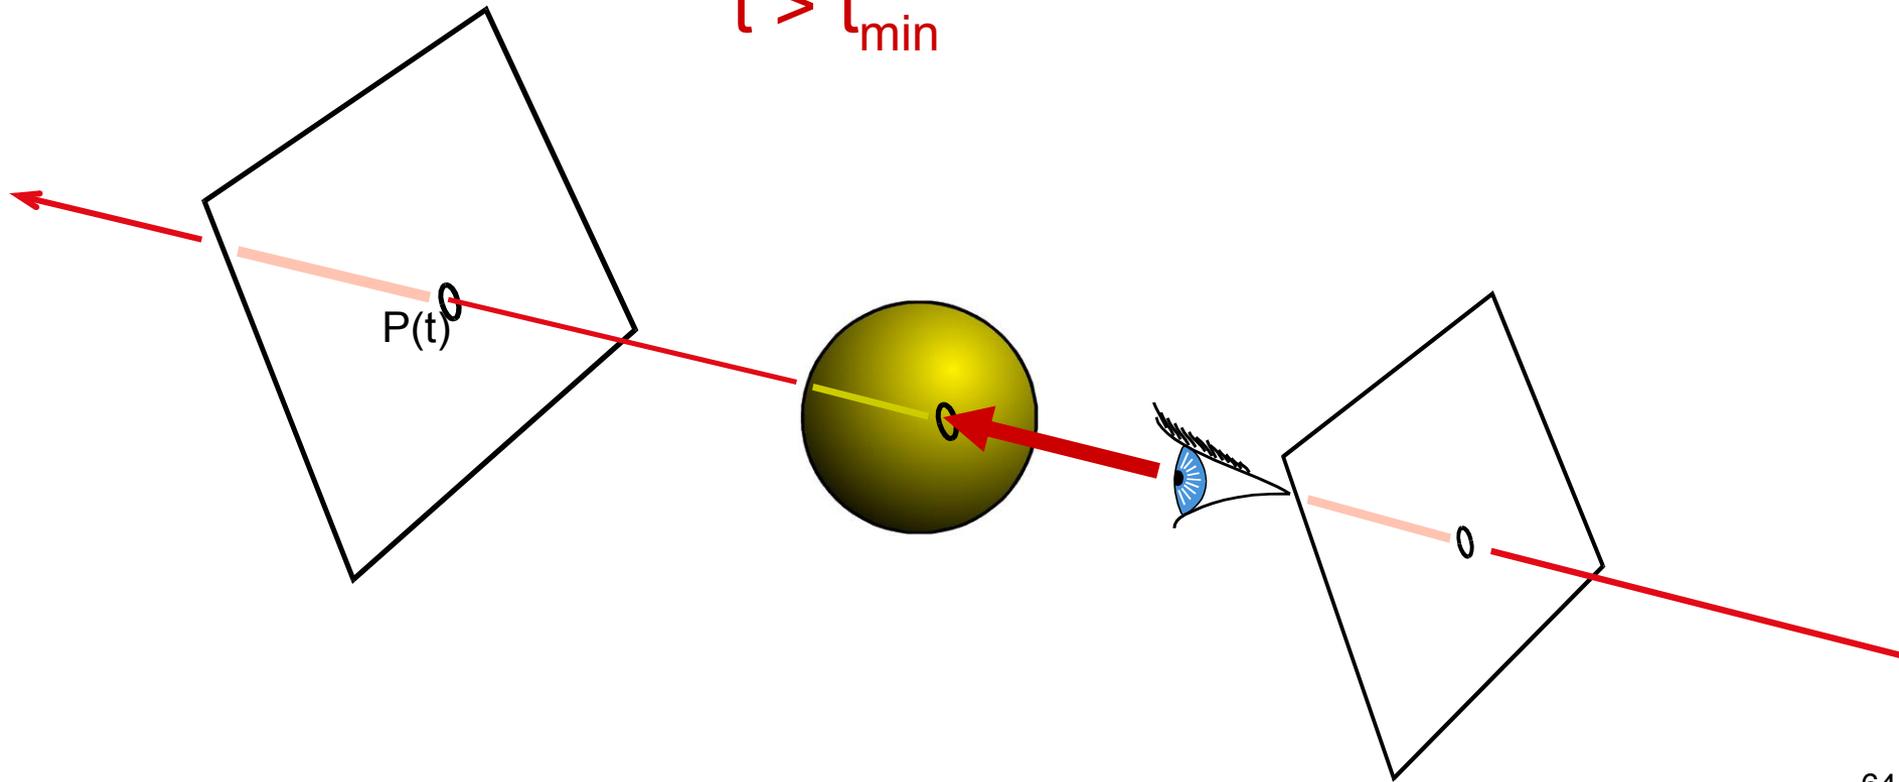

---

- Verify that intersection is closer than previous

$$t < t_{\text{current}}$$

- Verify that it is not out of range (behind eye)

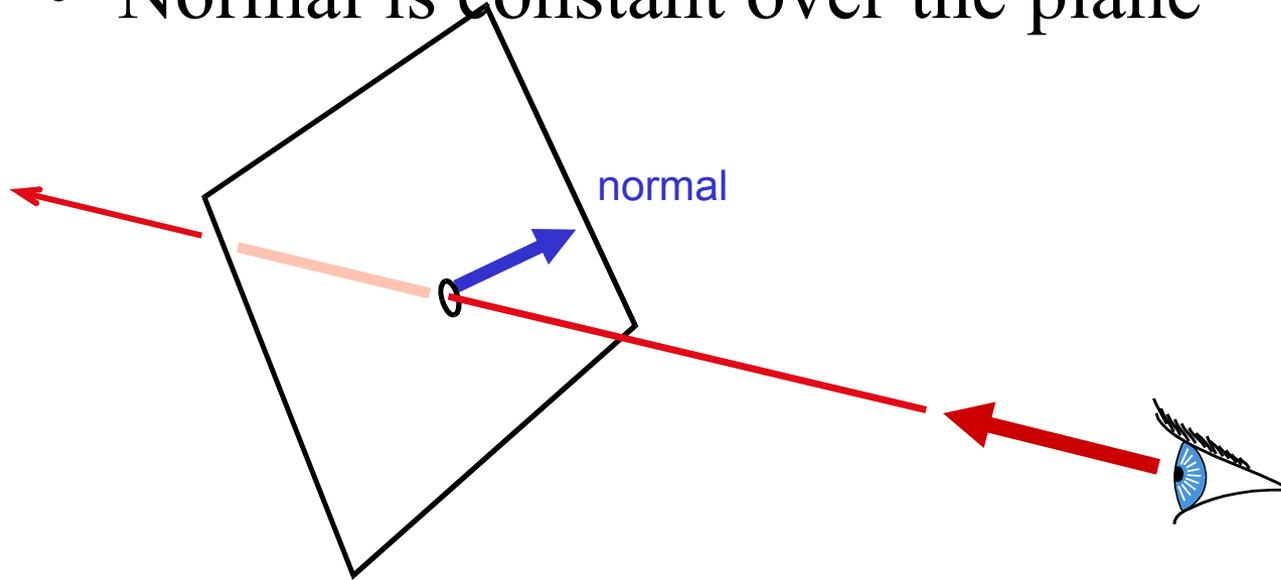

$$t > t_{\text{min}}$$

# Normal

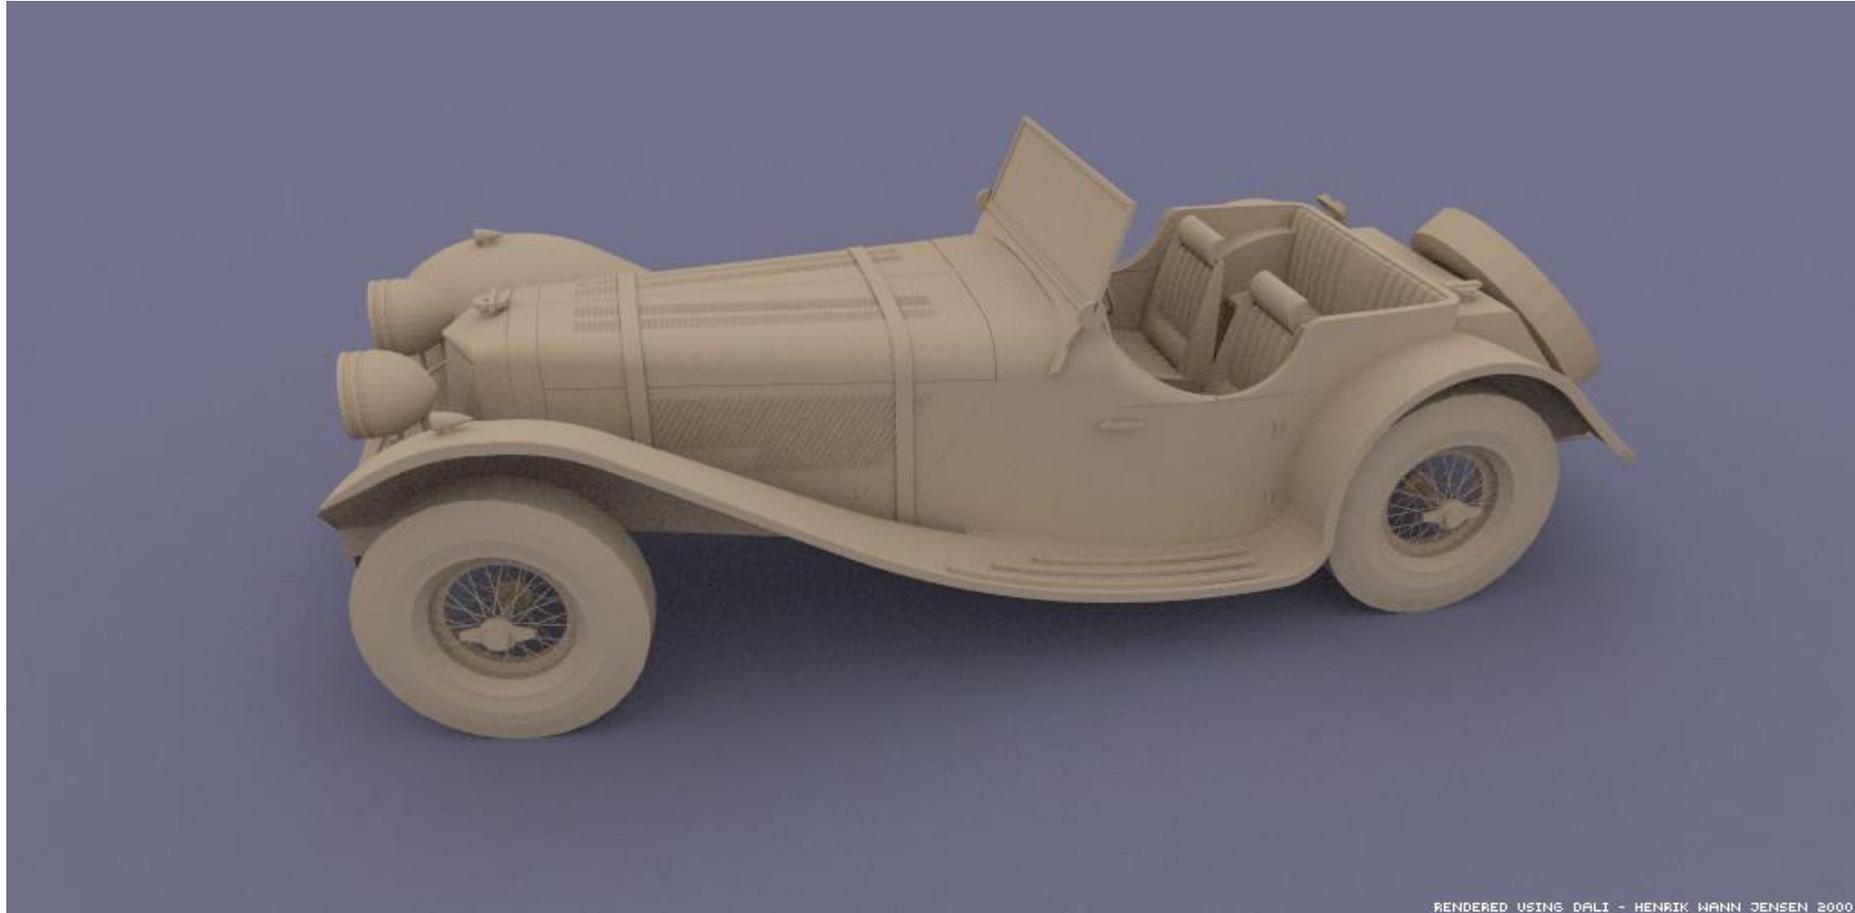

---

- Also need surface normal for shading
  - (Diffuse: dot product between light direction and normal, clamp to zero)
- Normal is constant over the plane

# Questions?

---

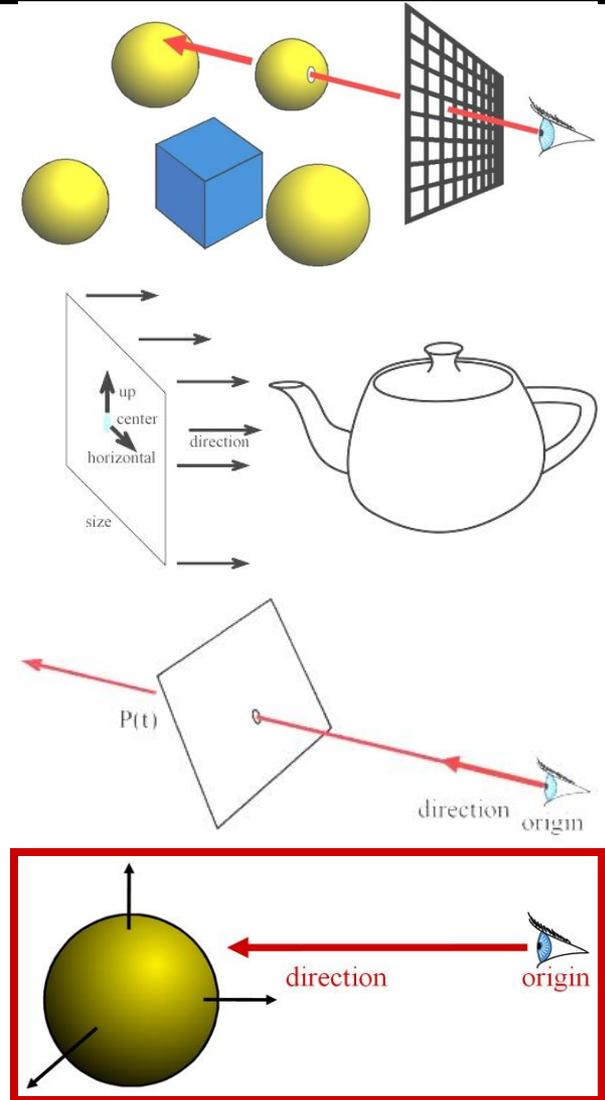

Courtesy of Henrik Wann Jensen. Used with permission.

Image by Henrik Wann Jensen

# Ray Casting

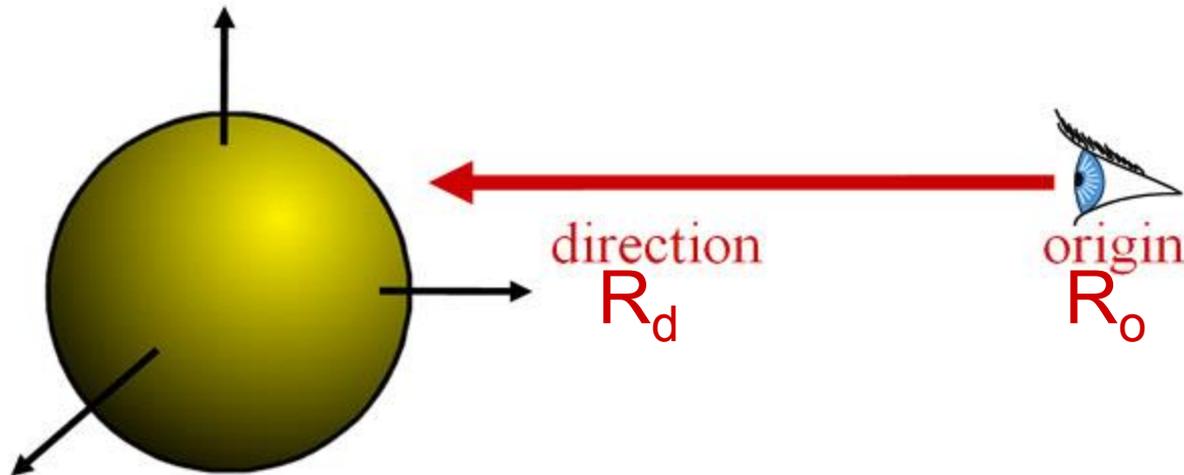

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection

# Sphere Representation?

---

- Implicit sphere equation
  - Assume centered at origin (easy to translate)
  - $H(P) = \|P\|^2 - r^2 = P \cdot P - r^2 = 0$

# Ray-Sphere Intersection

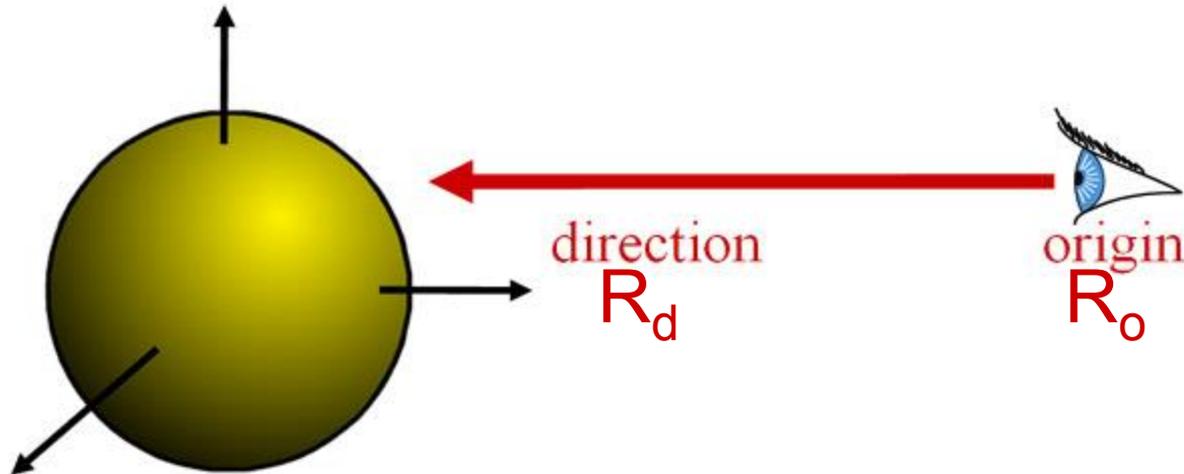

---

- Insert explicit equation of ray into implicit equation of sphere & solve for  $t$

$$\mathbf{P}(t) = \mathbf{R}_o + t \cdot \mathbf{R}_d \quad ; \quad H(\mathbf{P}) = \mathbf{P} \cdot \mathbf{P} - r^2 = 0$$

$$(\mathbf{R}_o + t\mathbf{R}_d) \cdot (\mathbf{R}_o + t\mathbf{R}_d) - r^2 = 0$$

$$\mathbf{R}_d \cdot \mathbf{R}_d t^2 + 2\mathbf{R}_d \cdot \mathbf{R}_o t + \mathbf{R}_o \cdot \mathbf{R}_o - r^2 = 0$$

# Ray-Sphere Intersection

---

- Quadratic:  $at^2 + bt + c = 0$ 
  - $a = 1$  (remember,  $\|R_d\| = 1$ )
  - $b = 2R_d \cdot R_o$
  - $c = R_o \cdot R_o - r^2$

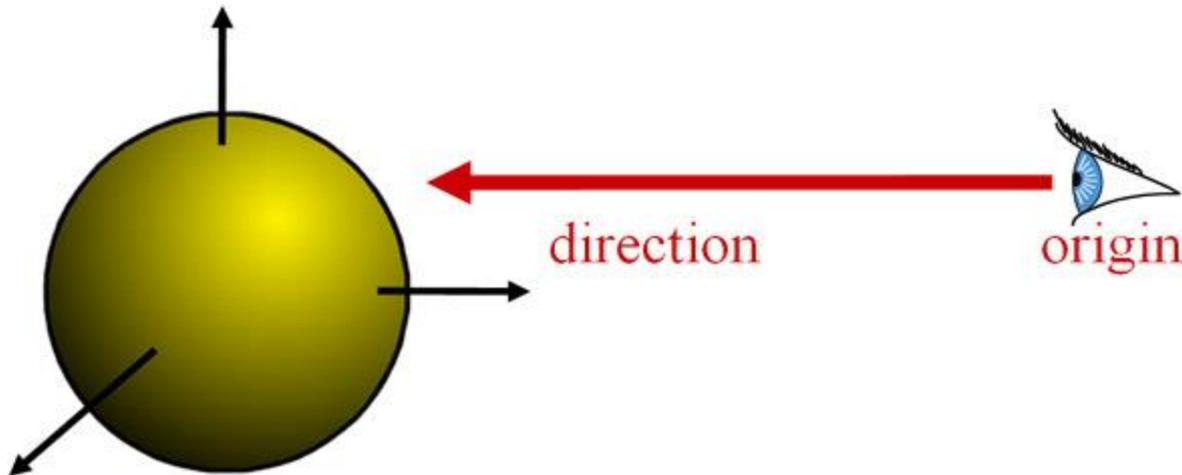

- with discriminant  $d = \sqrt{b^2 - 4ac}$

- and solutions  $t_{\pm} = \frac{-b \pm d}{2a}$

# Ray-Sphere Intersection

---

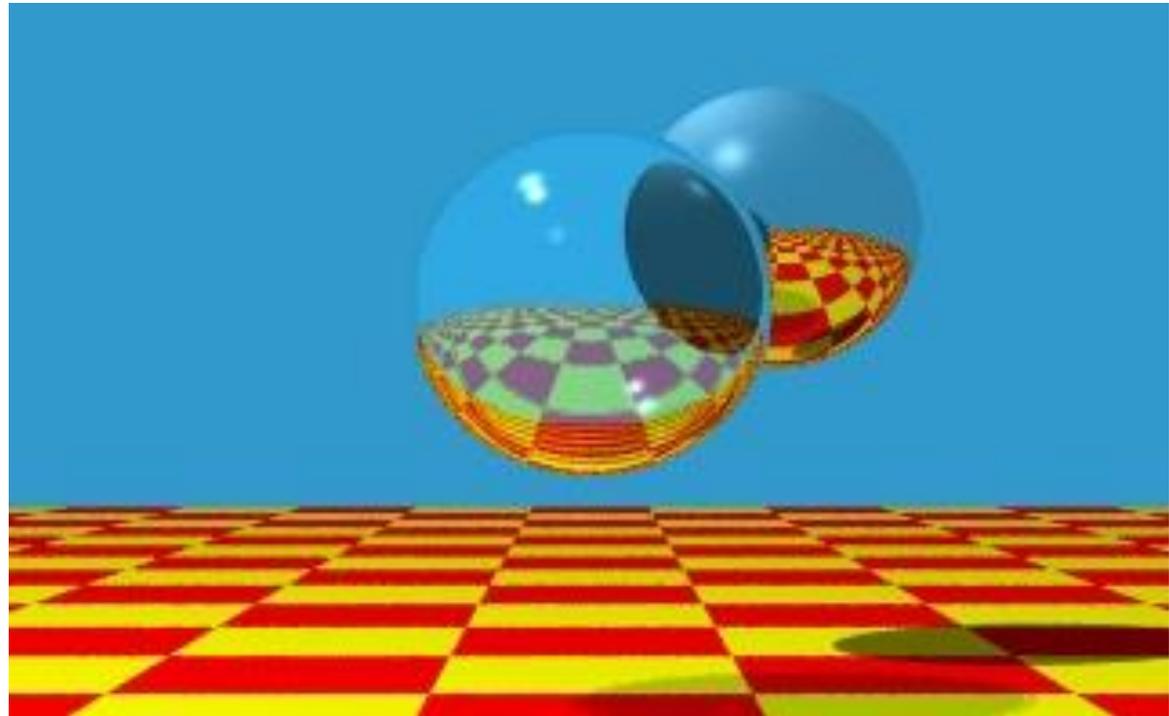

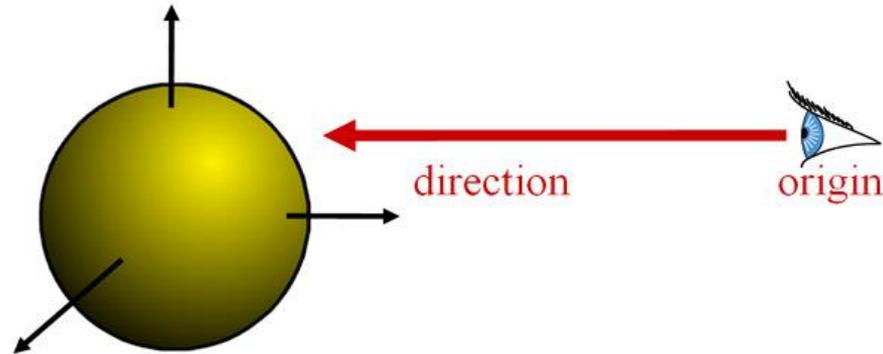

- 3 cases, depending on the sign of  $b^2 - 4ac$
- What do these cases correspond to?
- Which root ( $t^+$  or  $t^-$ ) should you choose?
  - Closest positive!

# Ray-Sphere Intersection

- It's so easy that all ray-tracing images have spheres!

:-)

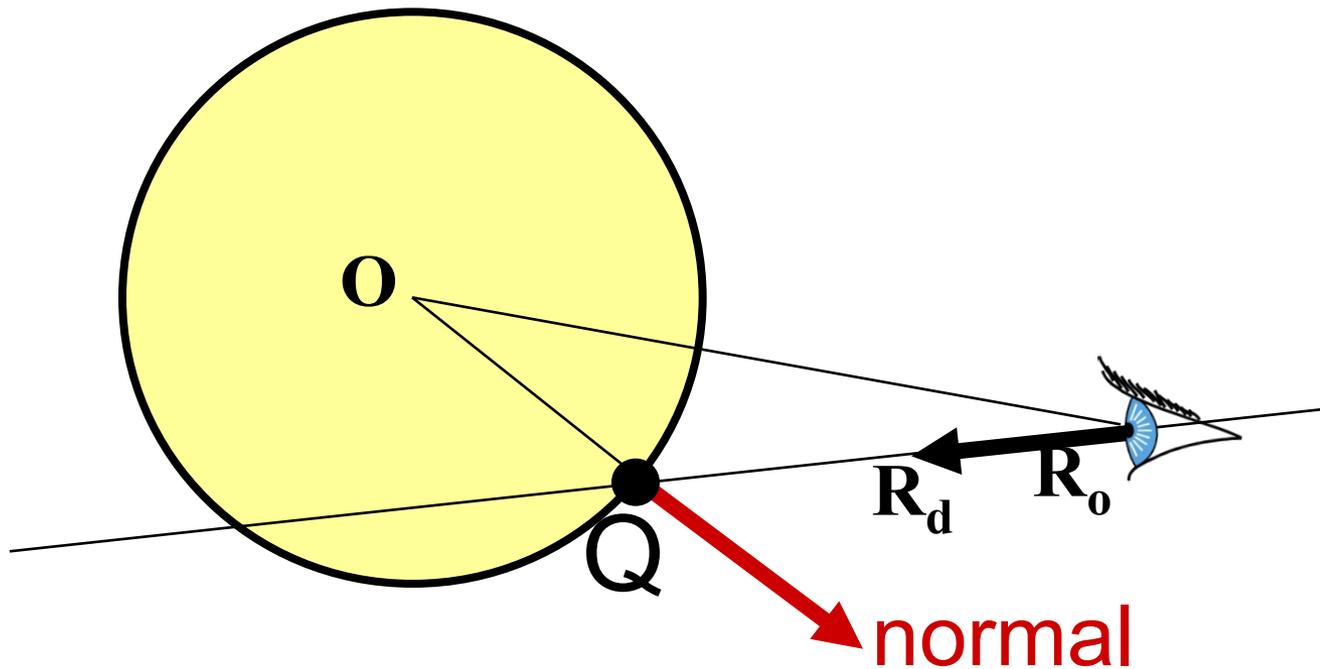

© source unknown. All rights reserved. This content is excluded from our Creative Commons license. For more information, see <http://ocw.mit.edu/help/faq-fair-use/>.

# Sphere Normal

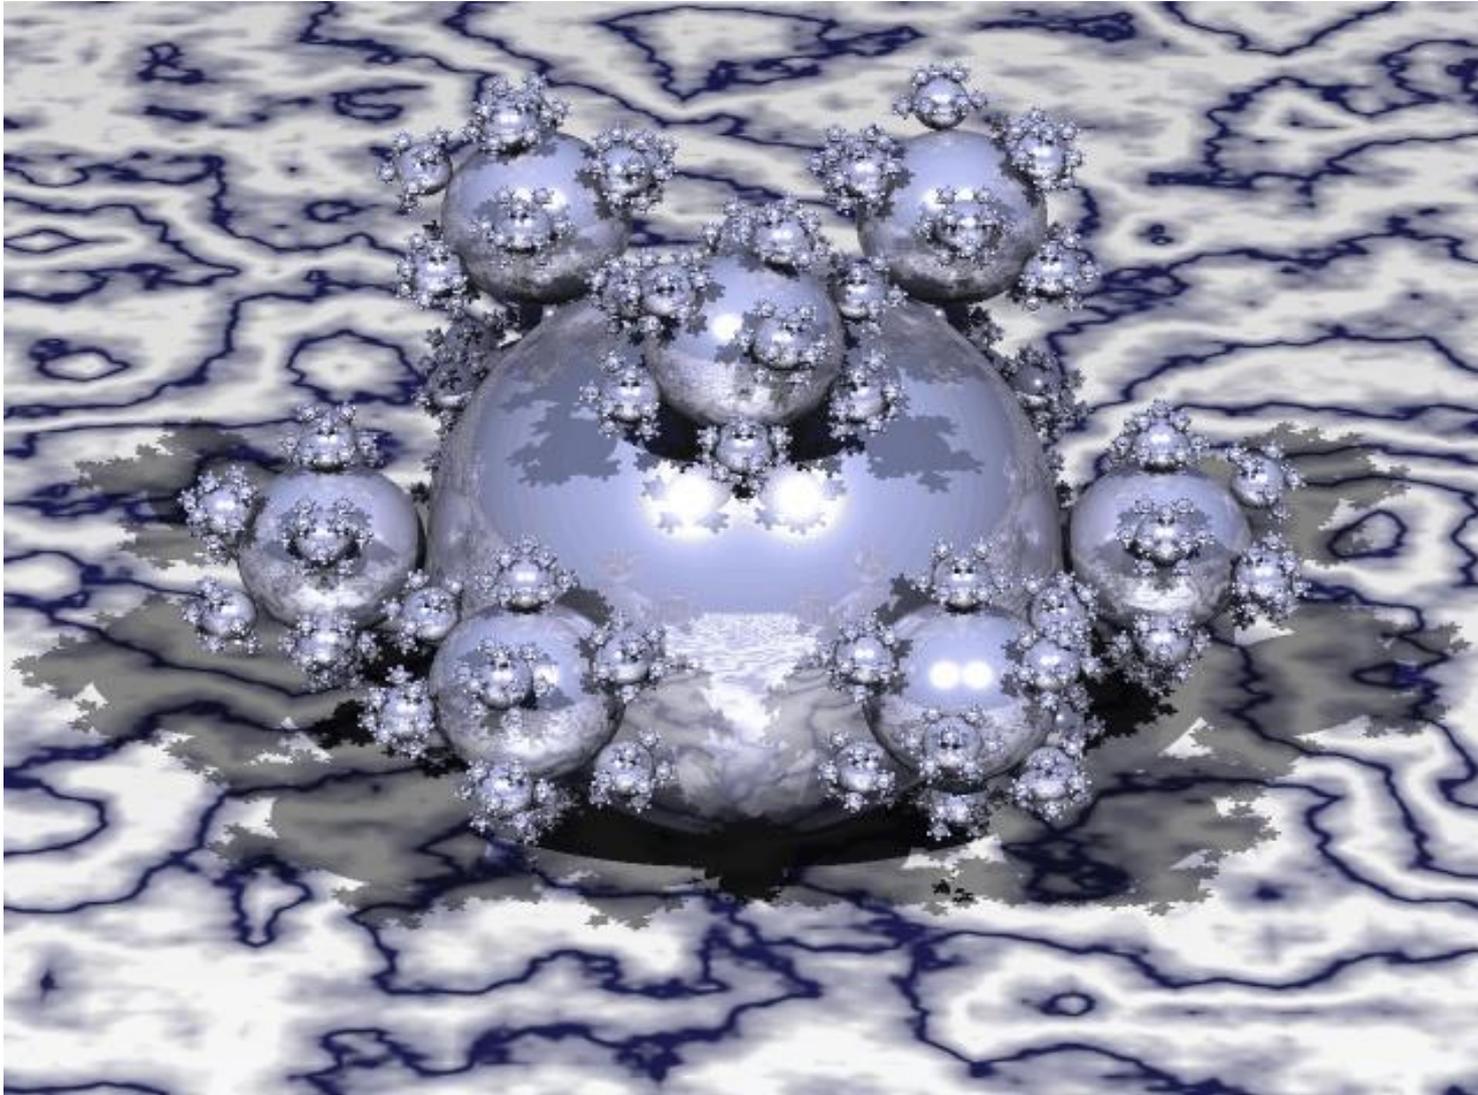

---

- Simply  $Q/\|Q\|$ 
  - $Q = P(t)$ , intersection point
  - (for spheres centered at origin)

# Questions?

---

Courtesy of Henrik Wann Jensen. Used with permission.

# That's All for Today

- But before we talk about the quiz, let's watch a **cool video!**
- Next time: Ray-triangle intersection, ray tracing
