

I'm not sure I get the pebble algorithm. I think an example in class would clear it up.

2D Pebble Game Demo

This applet demonstrates the $(2,3)$ -pebble game introduced by Jacobs and Hendrickson in 1997 and used to solve the **decision**, **spanning**, **extraction**, **optimization**, **components**, **redundancy**, and **Henneberg** problems for 2D bar-and-joint rigidity.

You may also be interested in the [pebble game for 3D body-and-bar/hinge rigidity](#).

3D Body-and-Bar/Hinge Pebble Game Demo

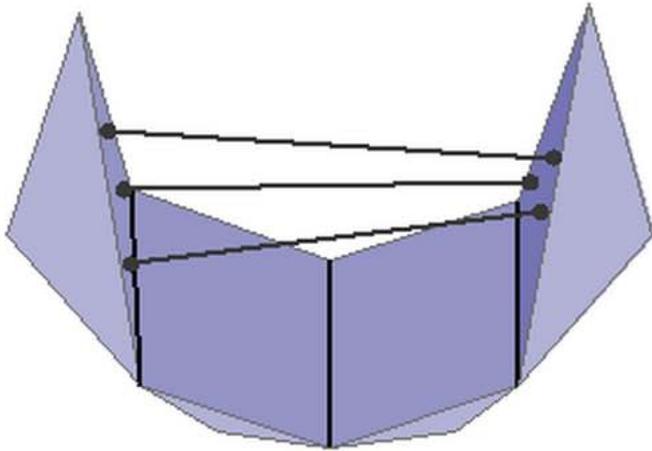

This applet demonstrates the $(6,6)$ -pebble game used to solve the **decision, spanning, extraction, optimization, components, redundancy, and Henneberg** problems for 3D body-and-bar rigidity.

You may also be interested in the [pebble game for 2D bar-and-joint rigidity](#).
