<input type="checkbox"/>	X	message	TextMessage	Testing

Pre-Built Applications:

Submit all Variables defined in any AngelXML document

Interpret HTTP Response As [?]

then go to

Label two parameters

- 1) Being **"number"**
- 2) Being **"message"**

"number" must be associated with a variable that has the number you want to text.

"message" should be the a variable contains the message as a string
