Birthday Matches

There are n people gathered in a room. What is the probability that at least 2 of them will have the same birthday?

- Use an R simulation to estimate this for various n .
- Find the smallest value of n for which the probability of a match is greater than .5.
- Explore how the number of trials in the simulation affects the variability of our estimates.

At least 2, 3, or 4 people match

Here's Johnny

Johnny Carson attempt 1
