

## **Final Exam Information**

The Final Exam will be closed book: you are not allowed to use any reference materials, including personal notes. There will be an information sheet passed out with the exam, similar to the one on the practice exam. The exam will cover all of special relativity. The exam will also cover the equivalence principle, which we will discuss in the last couple of lectures, but not any further aspects of general relativity.

As on the Midterm Exam, some of the Final Exam will be short answers, and some will involve short computations. You may want to bring a calculator, though the calculations can be done with paper and pencil. There will be questions on the exam that you have not seen before, but the basic ideas should be familiar from the course material. You will do the exam in "white books".
