

17.922 IAP 13

Activity 8

There will be a final vote for the top project and installation ideas.

One or two students in the class (preferably one or two of the facilitators) is chosen to be the main student leader of the installation. This person works with the main facilitator to coordinate all the various pieces of the installation. This person will order, pick up and deliver all large materials we need from Home Depot, will check in with each group periodically, will work with each group on the measurements and placement of their piece in Lobby 10, and coordinates the construction and placement in Lobby 10 on installation night.

There will also be the preliminary forming of groups. Rooms will be set up for each project and installation idea. Students will choose a group and begin to formulate their plans for the installation and/or project.

Students can move around among the different groups to see which group is the best fit.
