

# **11.479: Water & Sanitation Planning in Developing Countries**

## **February 11, 2005**

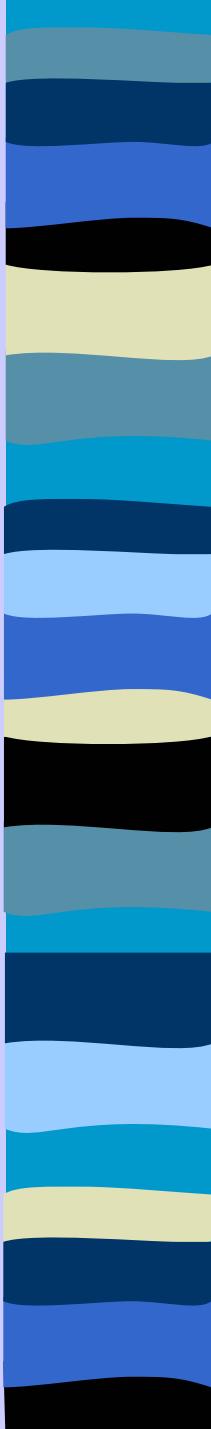

Logistical matters:

- First policy memo assignment

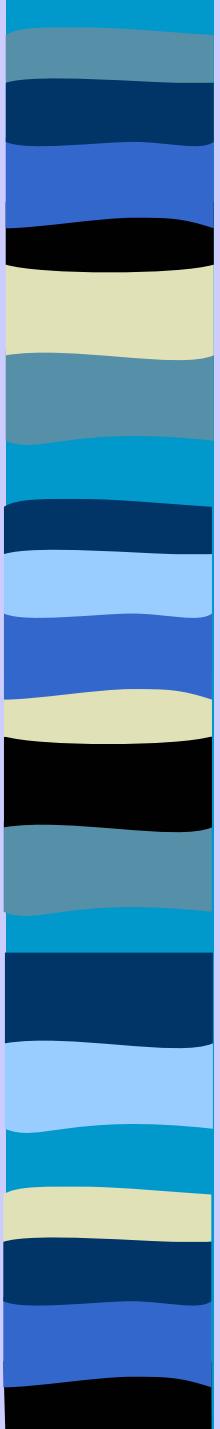

## Policy memo assignment

- Purpose: Provide an opportunity to apply learning to a ‘real world’ case in the form of planning recommendations
- Structure: 5-page (max.) policy memo
- Resources: All materials available on the MIT server
- Due date: Session 9 before class

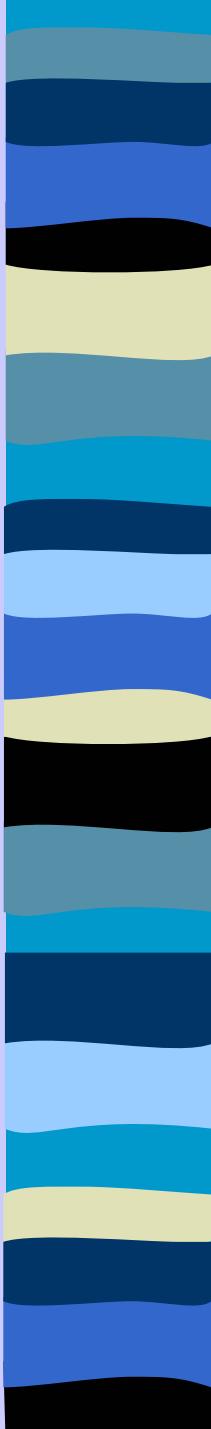

## Policy memo assignment, cont'd.

- Case site: Small town in Kenya
- Existing W&S services: water fetching from springs, purchasing from vendors; private and public latrines, open defecation
- No available grants from governments or external agencies to improve services; all financing must come from community or from loans
- See photos of communities like this one on the MIT server

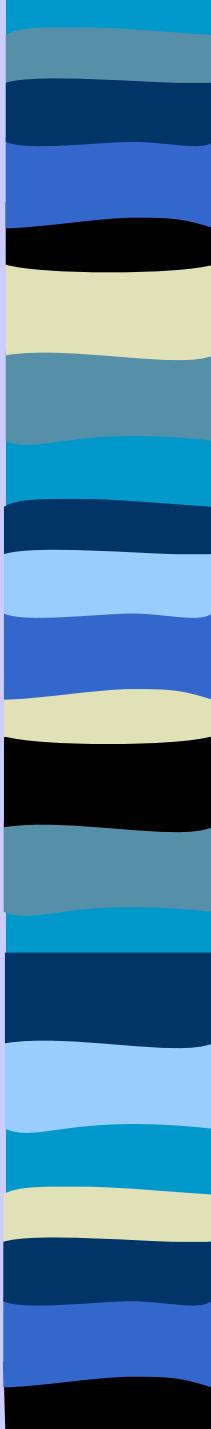

## Class objectives:

- Finish up last week's discussion about private-sector participation in W&S
- Discuss supply *versus* demand-oriented W&S planning
- Review approaches for demand assessment
- Consider how demand-responsive planning intersects with other objectives

# Privatization: A continuum, not an ‘either/or’ choice

| <i>Type of PSP arrangement</i> | <i>Asset ownership</i> | <i>Responsibility for capital investment</i> | <i>Commercial risk</i> |
|--------------------------------|------------------------|--|------------------------|
| Service or management contract | Public                 | Public                                       | Public                 |
| Lease                          | Public                 | Public                                       | Public& Private        |
| Concession                     | Public                 | Private                                      | Private                |
| BOT & variations               | Public& Private        | Private                                      | Private                |
| Divestiture                    | Private                | Private                                      | Private                |
| Independent service providers  | Private & Public       | Private                                      | Private                |

# Small-scale independent providers: The ‘other’ private sector

# Where is private-sector participation (PSP) happening in developing countries? Why?

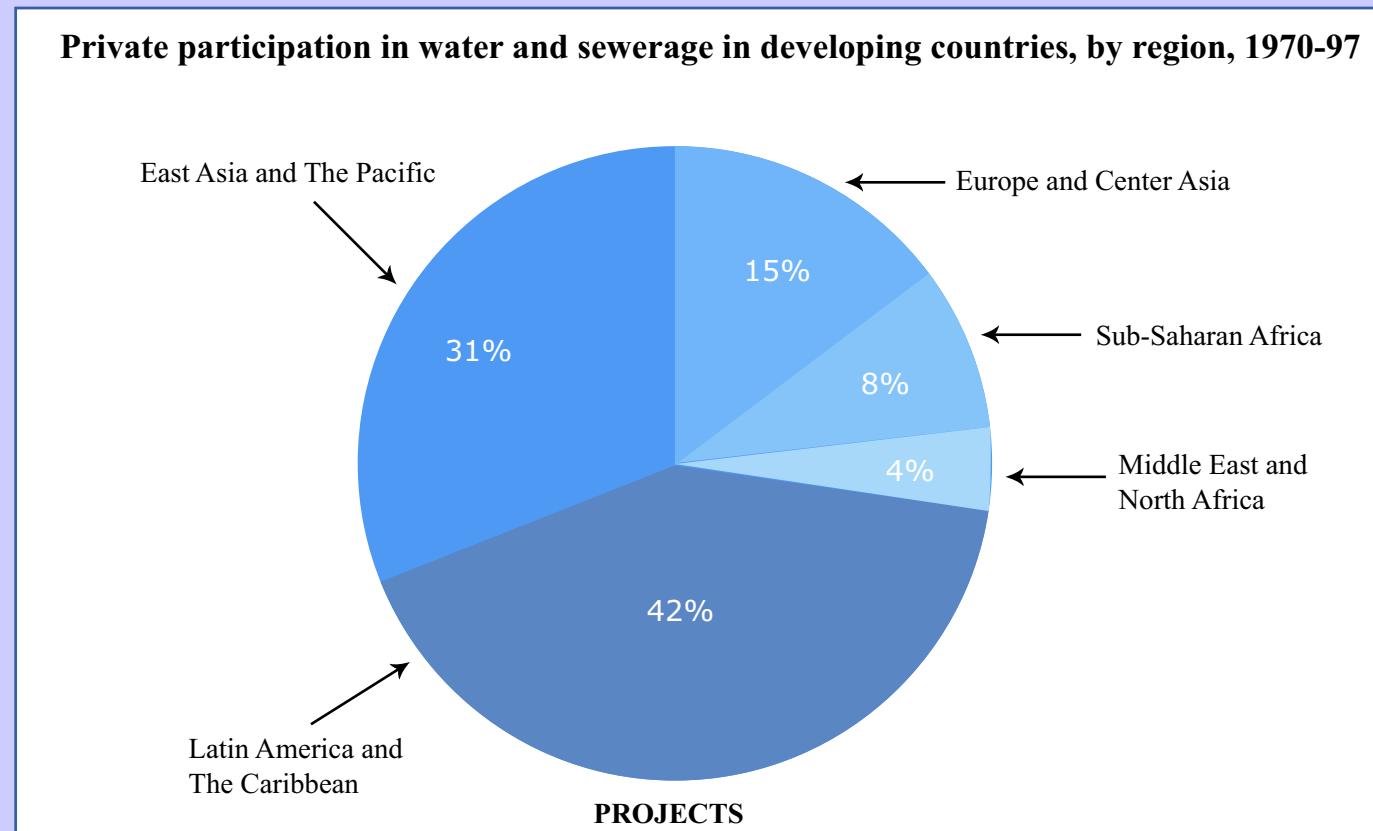

Figure by MIT OCW.

# Projects *versus* investment

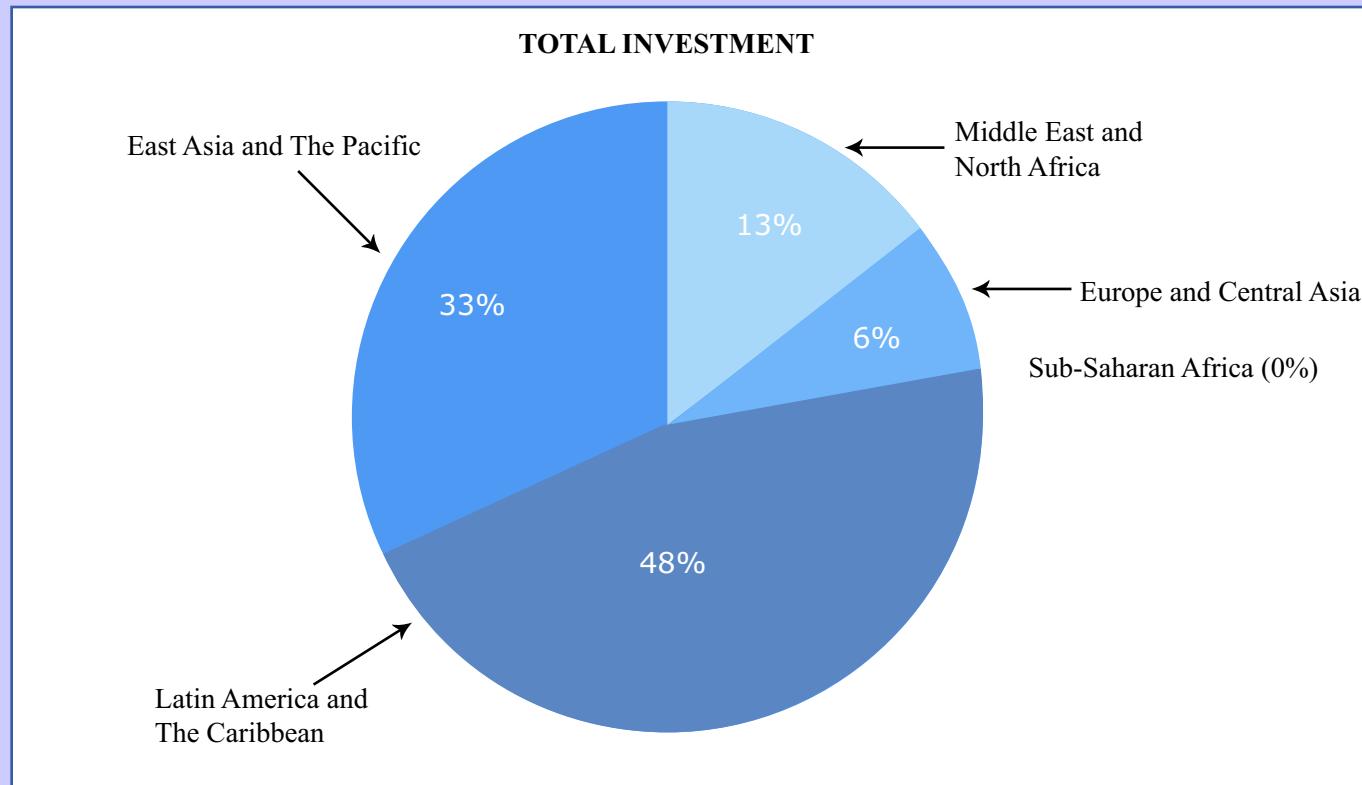

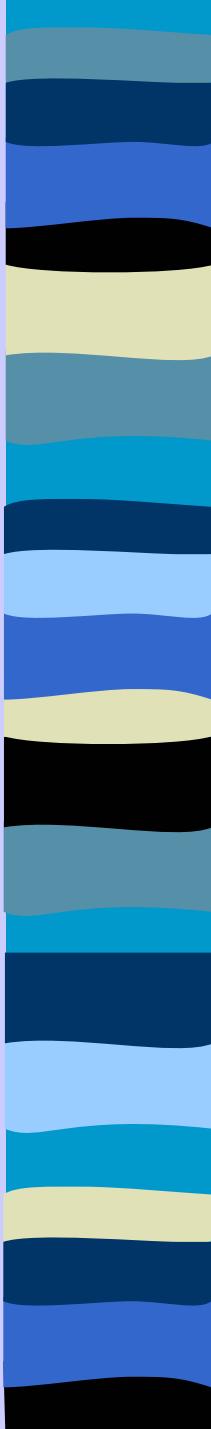

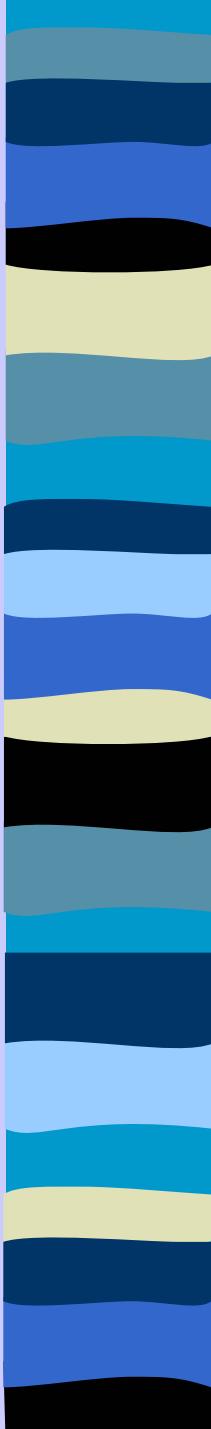

Figure by MIT OCW.

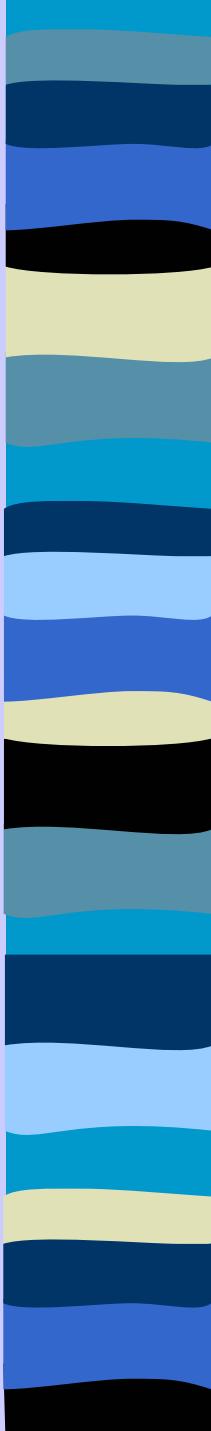

# Why might we want to increase private-sector participation in W&S service delivery?

- Access to capital markets
- Technical know-how/capacity
- Attention to efficient use of funds
- More accountability / responsiveness to households (?)
- Get out of the ‘low-level equilibrium’ (Spiller & Savedeoff)

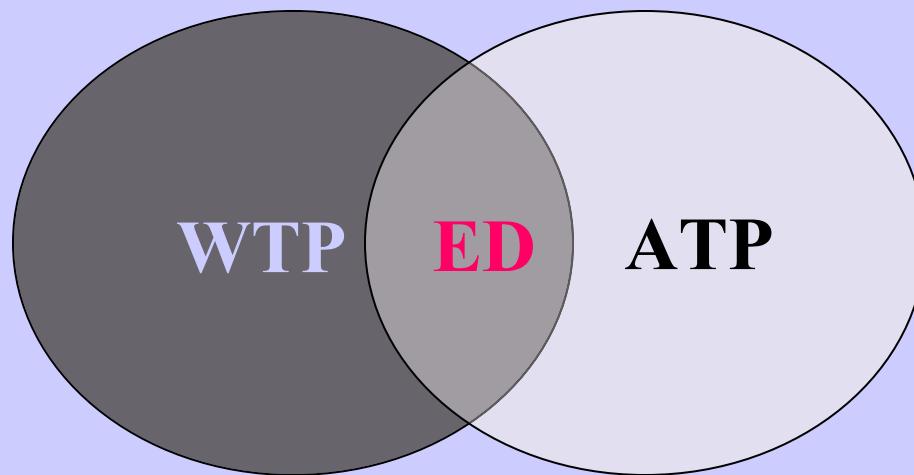

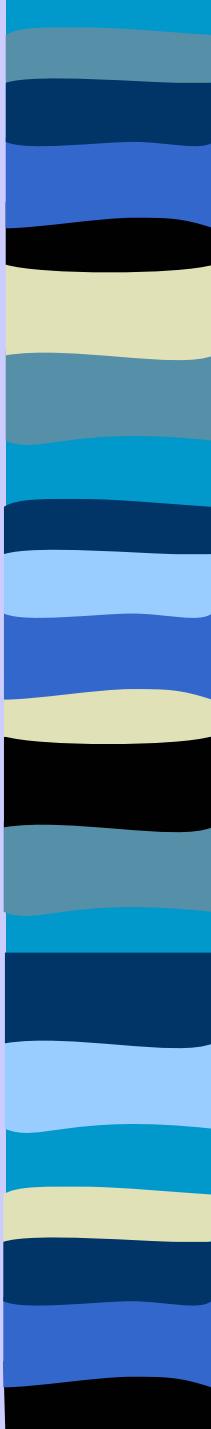

# What's the evidence on whether these objectives have been met with PSP?

| <i>Location</i>            | <i>Year &amp; form of PSP initiated</i> | <i>Indicator</i>               | <i>Values</i>                       |
|----------------------------|---|--------------------------------|-------------------------------------|
| Buenos Aires,<br>Argentina | 1993<br>Concession                      | Unaccounted-for water*         | 1992: 44%<br>1998: 34%              |
|                            |   | Employees per 1000 connections | 1992: 6.4<br>1995: 3.3<br>1998: 1.7 |
| Santiago,<br>Chile         | 1989<br>Concession & service contracts  | Unaccounted-for water          | 1990: 28%<br>1994: 22%              |
|                            |   | Employees per 1000 connections | 1993: 2.1<br>1994: 1.9              |
| Manila,<br>Philippines     | 1997<br>Concession                      | Unaccounted-for water          | 1997: 58%<br>2001: 52%              |
|                            |   | Employees per 1000 connections | 1997: 8.5<br>2001: 4.1              |

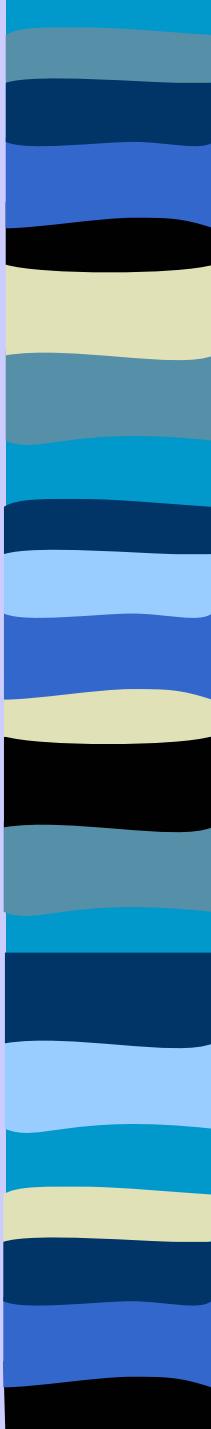

# Supply *versus* demand-oriented planning: What are the essential elements of each approach?

# *Supply versus demand-oriented planning*

|  | Supply | Demand |
|--|--------|--------|
| How are priorities among and within communities set? |        |        |
| Who decides on menu of technological options?        |        |        |
| How are service prices set?                          |        |        |
| Who designs the O&M regime?                          |        |        |
| What are the strengths of this approach?             |        |        |
| What are the weaknesses of this approach?            |        |        |

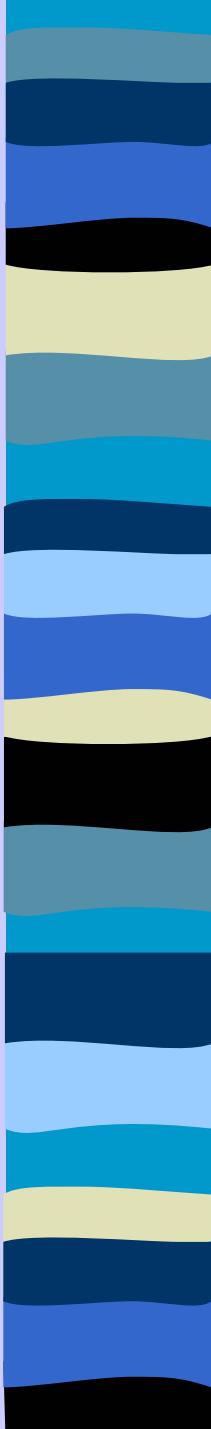

# Managing distributional implications of demand-responsive planning

*Republic of South Africa's Free Basic Water Policy*

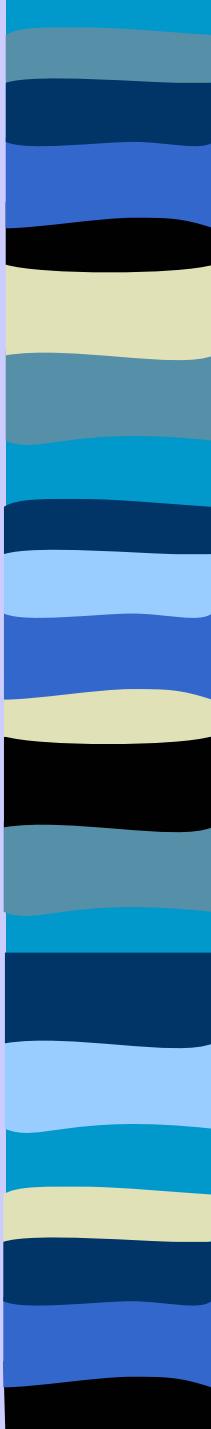

*"The basic policy of the Government is that services should be self-financing at a local and regional level. The only exception is that, where poor communities are not able to afford basic services, Government may subsidize the cost of construction of basic minimum services but not the operating, maintenance, or replacement costs."* (DWAF, 1994)

*"Procedures for the limitation or disconnection of water services must - ... (c) not result in a person being denied access to basic water services for non-payment, where that person proves, to the satisfaction of the relevant water services authority, that he or she is unable to pay for basic services".* (DWAF, 1997)

## Other challenges with DRA

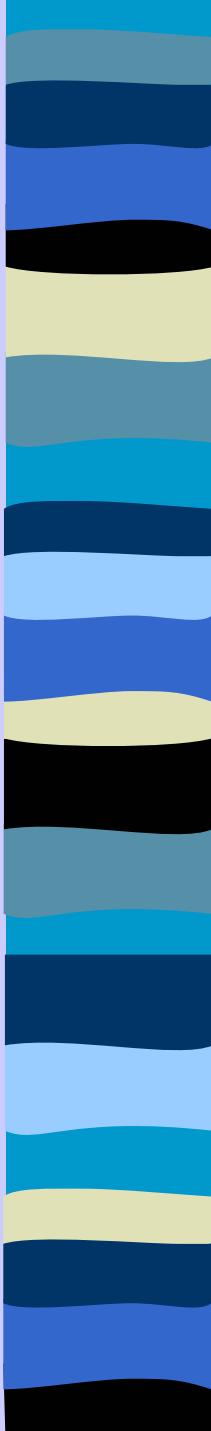

- “Undesirable” preferences: MacRae and Whittington in Haiti
- Heterogeneous preferences
- Low demand for sanitation: Whittington *et al.* in Indonesia
- Relationship between effective demand for initial improvements and demand, capacity for ongoing O&M?

# Origins of demand-oriented planning

## *Principle No. 4, Dublin Statement*

“Water has an economic value in all its competing uses and should be recognized as an economic good. Within this principle, it is vital to recognize first the basic right of all human beings to have access to clean water and sanitation at an affordable price. Past failure to recognize the economic value of water has led to wasteful and environmentally damaging uses of the resource. Managing water as an economic good is an important way of achieving efficient and equitable use, and of encouraging conservation and protection of water resources.”

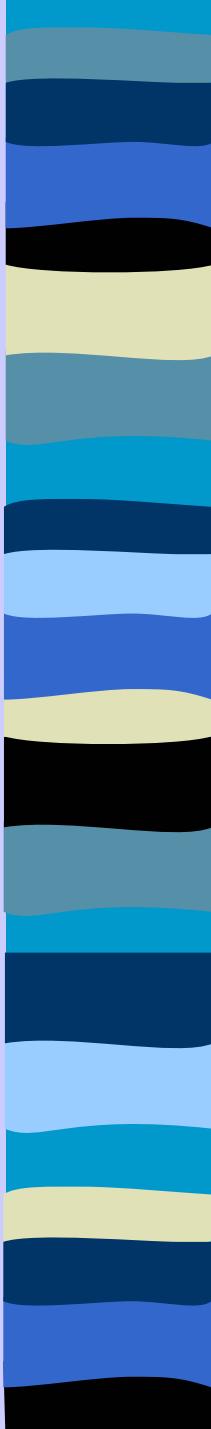

## Origins of demand-oriented planning, cont'd.

- Fiscal crunch / debt crisis
- Donors / Neoliberal policies / Structural adjustment / The ‘market model’
- Decentralization
- Poor performance in the sector

# The origins of demand-oriented planning

Table 2: Outcome, Sustainability, and Institutional Development (ID) impact by sector, network, lending type/source, region and WDI income group for exit fiscal years 1990–96, 1997, and 1998 (by real disbursements, FY96US\$)

| Sector                         | Exit FY 1990-96         |                   |                   |                     | Exit FY 1997            |                   |                   |                     | Exit FY 1998            |                   |                   |                     |
|--------------------------------|-------------------------|-------------------|-------------------|---------------------|-------------------------|-------------------|-------------------|---------------------|-------------------------|-------------------|-------------------|---------------------|
|                                | Disburse.<br>\$millions | Outcome<br>% sat. | Sust.<br>% likely | ID impact<br>% sub. | Disburse.<br>\$millions | Outcome<br>% sat. | Sust.<br>% likely | ID impact<br>% sub. | Disburse.<br>\$millions | Outcome<br>% sat. | Sust.<br>% likely | ID impact<br>% sub. |

# How do we assess demand for improved W&S services?

- Observed behavior: What are households spending on alternative services?
- Heuristics: Assumptions based on community type, location, *etc.* (the ‘five percent rule’)
- Key informants
- Benefit transfer: Use information about demand from one community to estimate demand for another community
- Primary data collection: Group meetings, other group data collection activities
- Primary data collection: Willingness to pay surveys

# How does the 5% rule fare in Massachusetts?

Average household bills 1986 -2002, MWRA communities

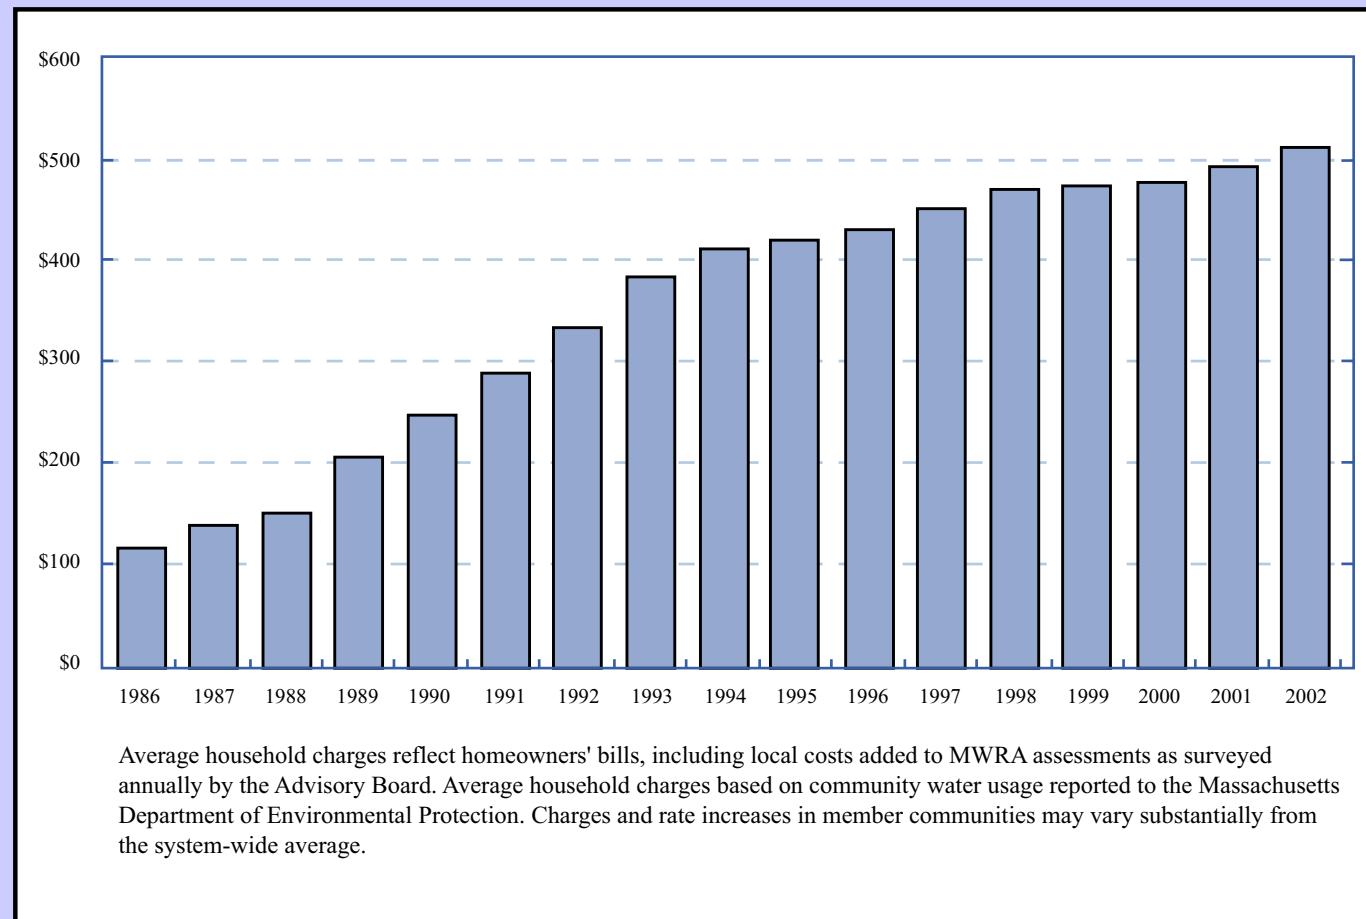

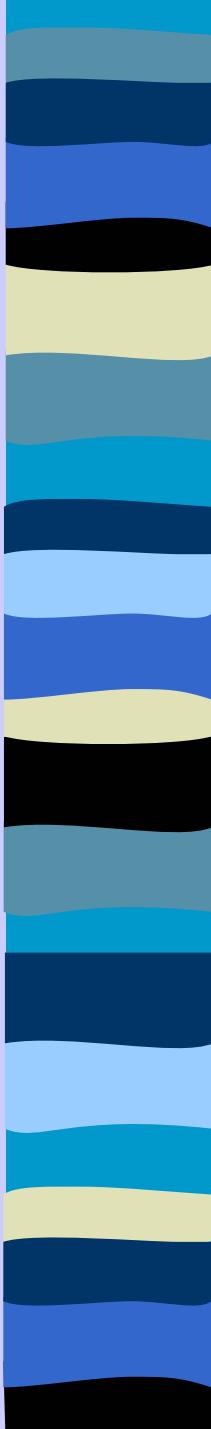

Figure by MIT OCW.

*What % of annual household income does this represent?*

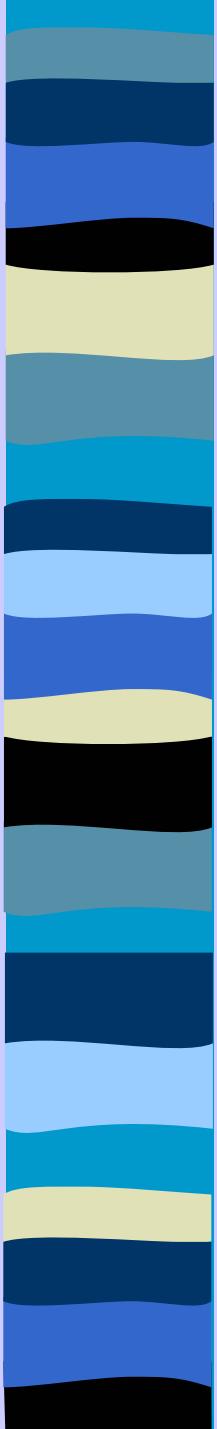

## Willingness-to-pay surveys (‘contingent valuation’)

- Can help elicit demand information for goods or services not currently provided
- Easy to do a bad job; can be costly to do a good job

Development of CVM in the US linked to Exxon *Valdez* oil spill (1989)

- 1991 settlement between Alaska, US gov’t. and Exxon ~US\$3billion
- CV study (1992) finds US\$2.8 billion in loss of ‘passive use’ value
- Much more information on this case, as well as on CVM debates (ask JD)

# Components of a high-quality CV study

- Description of good or service offered
- Explanation of costs and benefits
- Details on how much others pay, when good/service is provided, by whom, *etc.*
- Reminder about budget constraint
- Willingness-to-pay question
- Questions on socioeconomic and demographic characteristics of household (why?)

# Assessing validity in a CV study

## 1. Check the demand curve

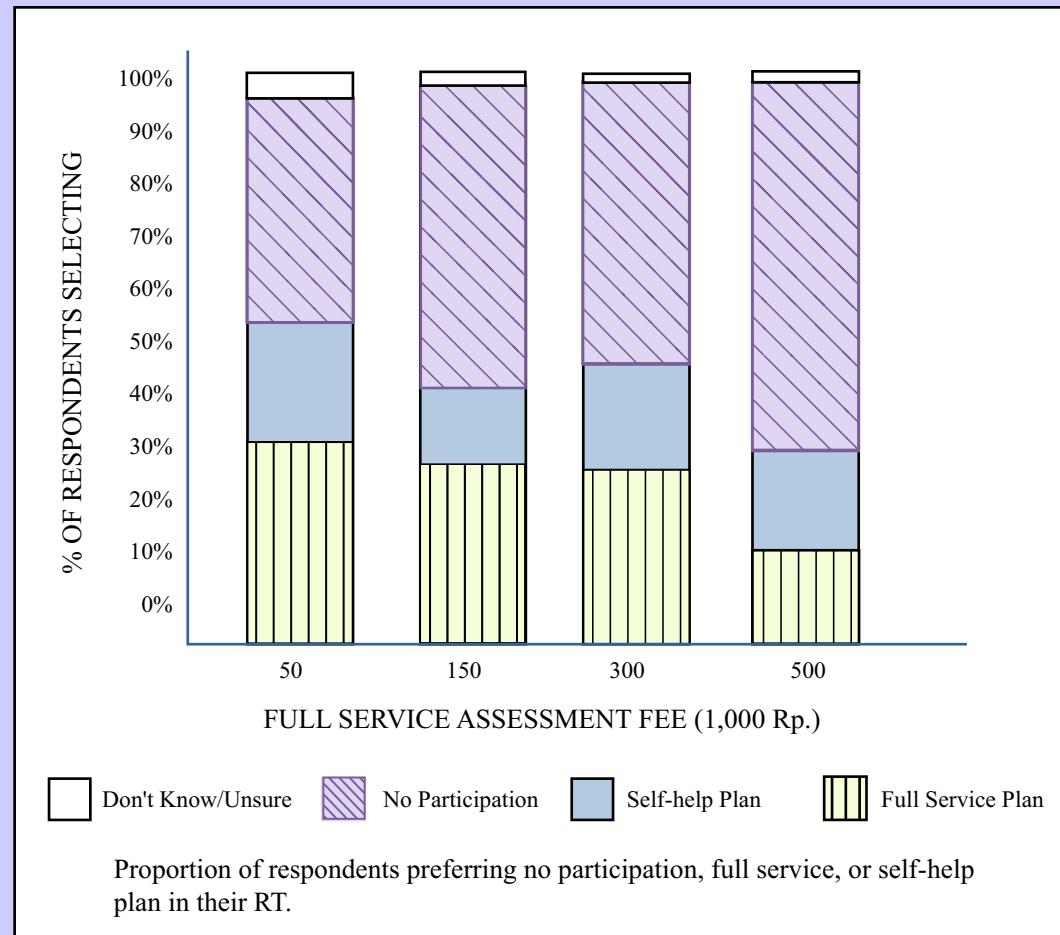

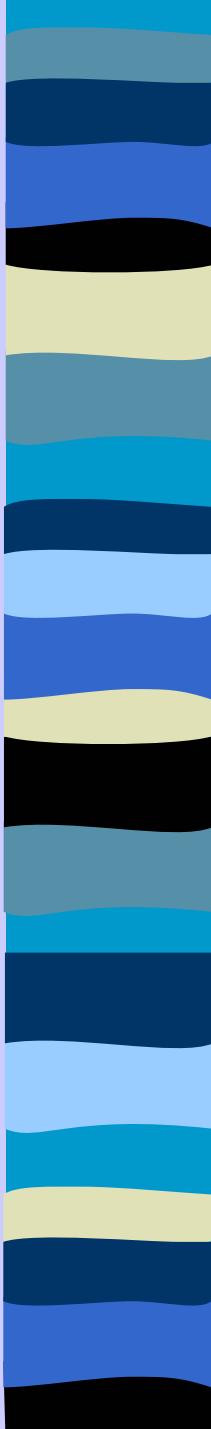

Figure by MIT OCW.

## Assessing validity in a CV study, cont'd.

2. Compare stated preference data with available revealed preference data.
  - Semarang, Indonesia: 11% of households obtain ‘all or almost all’ water from vendors, at a cost of approximately US\$20 per month
  - Morocco: WTP bids for improved water were high—but only about twice as high as actual expenditures on cigarettes

## Assessing validity in a CV study, cont'd.

2. Check that demand ‘tracks’ with other variables (e.g., income, current service level) as predicted

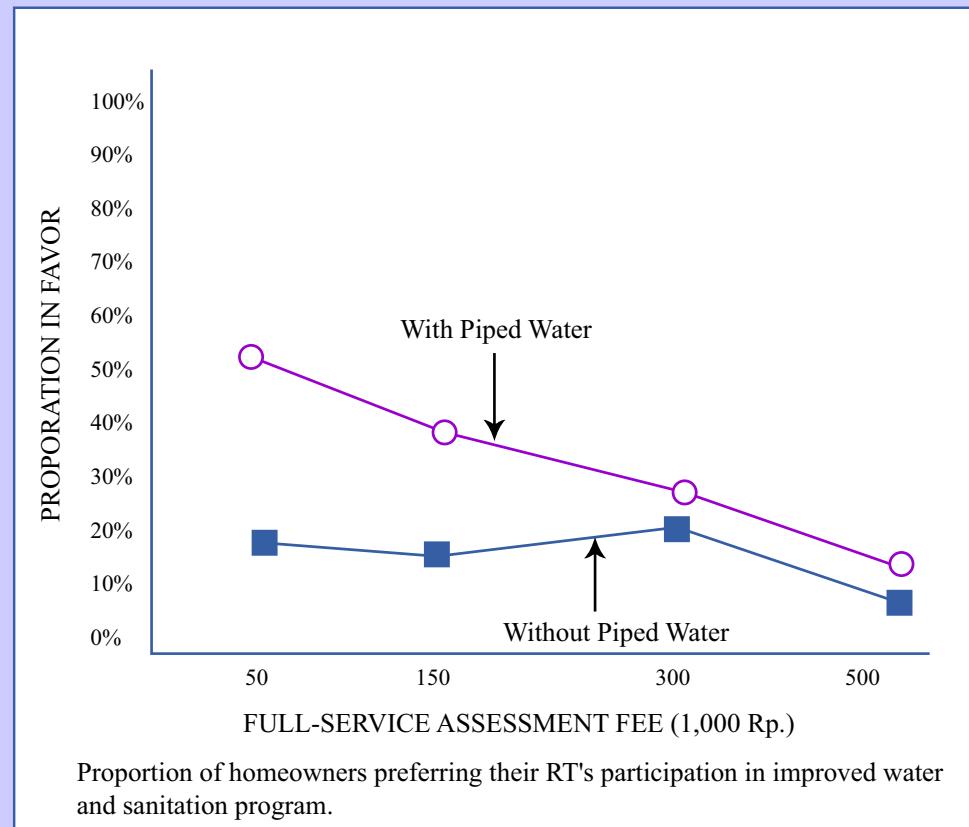

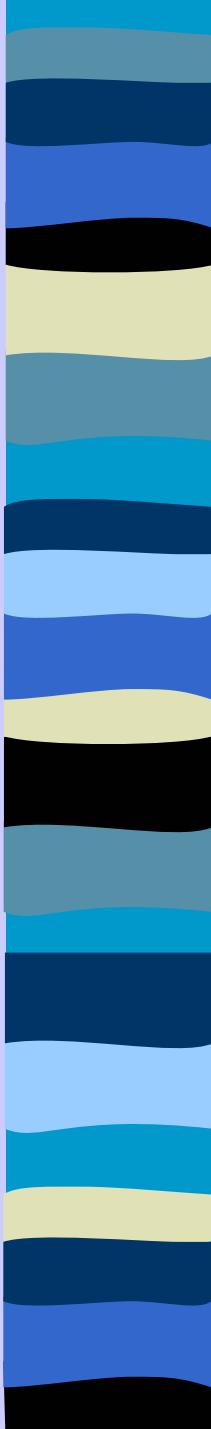

Figure by MIT OCW.

## Summing up

Demand-responsive planning can be useful when it:

- Forces us to think about the contribution of financial sustainability to overall sustainability of W&S infrastructure investments
- Gives us a reality check on assumptions about community needs and preferences
- Helps us generate more and better alternatives, and/or reveals why our alternative may not be attractive
- Lets us know whether capital grants, or merely financing, is needed for users to cover most/all of the costs of improved services

However, DRA raises concerns with respect to fairness and inclusiveness, which is one reason that CVM has not had greater influence on W&S planning and policy.
